Re: Agenda Item No. 20-6-4 – Control Measure for Ocean – Going Vessels At Berth

Dear Chair Nichols and Members of the Board:

On behalf of Earthjustice, I submit the following letters from Earthjustice supporters encouraging the California Air Resources Board to move forward on several life-saving regulations to combat deadly diesel pollution (appended as "Attachment A"). As you can see, more than 3,400 Californians submitted letters advocating for adoption of a strong regulation to control ship pollution while at berth as quickly as possible. It is our understanding that the shipping and oil industries have been vigorously fighting these regulations, and we ask that this Board have the courage to stand up to these powerful interests and advocate for the health of Californians.

We appreciate your consideration of these letters, and we look forward to working with the Air Resources Board to clean up harmful pollution from the freight industry.

Sincerely,

Adriano L. Martinez
Staff Attorney with Right to Zero Campaign
