Dear Clerk of the Board and Staff,
Attached please find Coltura's comments on the 45 Day LCFS Regulatory Language.
Thank you for your leadership on this issue and consideration of these comments.

Sincerely,

Janelle London

April 26, 2018

Sam Wade
Fuels Division Manager California Air Resources board 1001 "I" Street
Sacramento, CA 95814

Dear Mr. Wade,

Coltura endorses the comments submitted by the Smart EV Charging Group on April 23, 2018 regarding the California Air Resources Board's Pre-Rulemaking on Low Carbon Fuel Standard.

Our organization aims to reduce the environmental impact of transportation by phasing out gasoline and diesel vehicles and moving to clean alternatives. We believe the proposal submitted by the Smart EV Charging Group supports an accelerated transition to a zero emissions transportation future, and therefore we support it.

Electric vehicles and charging infrastructure are being deployed with increasing success. However, to maximize the positive environmental benefits of this trend, a corresponding increase in charging sources with low emissions intensity is needed. We believe that lowering the emissions associated with charging through cleaner generation sources, on-site generation of renewables, and/or charging during times of the day and year when clean generation is abundant are all effective means to achieve this.

We are thankful for CARB's leadership on this important matter and encourage you to enable counties to help further contribute to the State's ambitious climate goals.

Regards,

Janelle London
