Dear [@legislatorTitle] [@legislatorLast],

I have lived in California for 42 years. In that time, haze in Yosemite and other national parks has gotten worse and worse. You can help.

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Do your job and protect beautiful California from haze in our precious national parks.

Thank you,
Becky Evans

-- Sent from **Suzanne Hume** to **Regulatory comment to CARB Board** on Jun 9, 2022 --

Dear [@legislatorTitle] [@legislatorLast],

Please reject your CARB proposed haze plan. We must prioritize our national treasures: our children, clean air & water, healthy ecosystems, public lands, parks & monuments, forests, rivers, oceans and wildlife. Fossil fuels, toxic chemicals, exhaust & pollution are destroying our air and water quality, parks, public lands, ecosystems, public health & wellness, children's health & development and their ability to learn, grow and thrive.

It is important that you, California Air Resources Board (CARB) reject the proposed haze plan in order to ensure clean air, clearer views in our national parks and wilderness areas, and opportunities for the public to visit and safely enjoy our public lands.

California's national parks: Yosemite, Sequoia, and Joshua Tree, suffer from some of the worst air pollution and haziest skies in the nation! Not only are views blocked with pollution, but the health of people & wildlife is harmed

Dirty air is unacceptable. We have clean energy alternatives! No burning of trees and biofuel! We must stop burning stuff!

Blocked views not only take away opportunities to learn, enjoy but air pollution directly harms the health of people, park visitors, staff and park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

The time to act is now--it is long overdue--and the industries involved have known for a very long time that they are big contributors to the problem. Since they have not corrected their pollution problems themselves, it is up to regulations to correct the problems. Please act now to protect the environment, the state, the planet, and all inhabitants.

Thank you,
Pam Reeves

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Loan Nguyen

Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Kathy Yeomans

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Gabriel Graubner

-- Sent from **Michael Michel** to **Regulatory comment to CARB Board** on Jun 9, 2022 --

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

-- Sent from **Christopher Jennings** to **Regulatory comment to CARB Board** on Jun 9, 2022 --

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Christopher Jennings

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Laurel Crockett

Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Stella Kim

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

I grew up in the days of heavy air pollution and it was terrible! Population and industry have increased dramatically since then, so we need even stricter pollution regulations.

California is home to some of our country's most beloved and important national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Instead, the plan fails to analyze all sources of haze pollution or require any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills.

No, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. Well, NO, these rules are NOT good enough!

While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut just one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

If stronger rules harm the economy, our government should work with polluting industries toward cleaner industrial processes and renewable energy. During the Great Depression and WWII, Americans came together in times of economic hardship, working toward a better future. Our leaders should encourage this cooperative attitude.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,

Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Mark Glasser

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
manuel santos

Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Diane Cantwell

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Renaldo Gonzalez

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

-- Sent from **Fred Granlund** to **Regulatory comment to CARB Board** on Jun 9, 2022

--

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Fred Granlund

-- Sent from **Amy Meyer** to **Regulatory comment to CARB Board** on Jun 9, 2022 --

Dear [@legislatorTitle] [@legislatorLast],

I have worked as a volunteer advocate for the national parks in California for over 50 years. I am called the "Mother of the Golden Gate National Recreation Area." I do not want to see what I have helped to protect diminished by poor air quality - especially when it is possible to cut the emissions that create haze. CARB needs to get much tougher,

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Bryan Rosen

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
R.G. Tuomi

-- Sent from **Tami Dorraugh** to **Regulatory comment to CARB Board** on Jun 9, 2022 --

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
David Camp

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Karen Ahn

Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Judy Shively

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
April Parkins

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. -- Sent from **Alexandra Crisafulli** to **Regulatory comment to CARB Board** on Jun 9, 2022 --

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Alexandra Crisafulli

Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Kristy Pace

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Barbara Burke

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

-- Sent from **N. Kaluza** to **Regulatory comment to CARB Board** on Jun 9, 2022 --

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
N. Kaluza

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Gilia Humrich

Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Carol Cook

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Kira Durbin

Dear [@legislatorTitle] [@legislatorLast],

I urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

Although California is home to some of our country's most beloved national park sites (like Yosemite, Sequoia, and Joshua Tree), these national treasures often suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views and harms the health of people across our state, as well as park visitors and employees. It also negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas, but fails to require any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills. CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what cuts only one pollutant is insufficient.

Given California's worst in the nation air quality, we need a stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Adrianne Micco

Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Jennifer Allen-Prather

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

-- Sent from **Lenore Sparks** to **Regulatory comment to CARB Board** on Jun 10, 2022 --

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Lenore Sparks

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Sue Parry

Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Darynne Jessler

-- Sent from **I Zevos** to **Regulatory comment to CARB Board** on Jun 12, 2022 --

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Dear [@legislatorTitle] [@legislatorLast],

I watched a documentary narrated by David Attenborough the other day called, 'The Year Earth Changed'. It was a chronicle of exactly what happened - ACROSS THE WORLD - when we humans became confined to our own little living spaces in March 2020. Within a few months time of planetary quarantine the air quality, water quality...quality of Life for all the other beings with whom we share this planet...improved to the point where beaches and cities around the globe were measuring water and air quality improvement by 70% on average. That is simply because we, the ones with 'the brains', became the ones locked in cages. I found it a dramatic reminder that there is, indeed, a way for us to stop - a way to reverse the damage we've created.

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

-- Sent from **Dorothy Brown** to **Regulatory comment to CARB Board** on Jun 14, 2022 --

Dear [@legislatorTitle] [@legislatorLast],

I urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our most beloved national park sites, including Yosemite, Sequoia, and Joshua Tree. Yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views. It harms the health of people across our state, park visitors and employees; and it negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. However, instead of analyzing all sources of haze and requiring new pollution controls on the major industrial sources of haze, such as oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan which declares that existing clean-vehicle rules to cut nitrogen oxides are good enough. While vehicles are a significant part of the haze problem, current regulations regarding a single pollutant source are insufficient and unacceptable.

Given California's poor air quality, we need a dramatically stronger regional plan that properly analyzes all types of haze pollution and requires effective emission controls to protect our national parks, wilderness areas, and local communities from harmful industrial pollution. Please reject the proposed plan and work toward a more effective one that addresses the crisis of dirty air in our state and national parks.

Thank you,
Dorothy Brown

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough. While vehicles are a significant part of our haze pollution problem, what is already on the books and on the way to cut one pollutant does not suffice and is simply unacceptable.

Given California's worst in the nation air quality, we need a dramatically stronger regional haze plan that properly analyzes all types of haze pollution and requires unique emission controls from industrial sources of pollution harming our national parks and wilderness areas and local communities.

Please reject staff's haze plan and require significant improvements to address more pollution types and sources to actually address the crisis of dirty air in our state and in our national parks.

Thank you,
Barbara Williamson

Dear [@legislatorTitle] [@legislatorLast],

I write to urge the California Air Resources Board (CARB) to reject the proposed haze plan in order to ensure clean air and clearer views in our national parks and wilderness areas.

California is home to some of our country's most beloved national park sites like Yosemite, Sequoia, and Joshua Tree, yet these national treasures suffer from some of the worst air pollution and haziest skies of any in the nation. Dirty air has led to dramatically obscured views, harms the health of people across our state, park visitors and employees, and negatively affects the long-term viability of our already threatened park ecosystems.

CARB's federal regional haze plan is supposed to work towards improving visibility in many of California's national parks and wilderness areas. Yet, instead of analyzing all sources of haze pollution and requiring any new pollution controls on the major industrial sources of haze pollution in the state like oil and gas and chemical facilities and pulp and paper mills, CARB is proceeding with a plan that declares that existing clean vehicles rules to cut nitrogen oxides are good enough.
