Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Arlene Baker

Berkeley, CA 94704

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Gary Dowling

Novato, CA 949473624

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

David Killoran

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Francine Karuntzos

Huntington Beach, CA 926473551

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Karyn LeBrun

Escondido, CA 920274246

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Patrice Wallace

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

David Levy

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Betty Eiseman

Westlake Village, CA 0

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

John Beuttlet

Berkeley, CA 947021116

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Linda Morgan

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Autumn Scott

Escondido, CA 920266136

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Norma Bermudez

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Andrew Fesler

Carlsbad, CA 920081004

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Robert Jardine

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Jessica Mitchell-Shihabi

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Ed Elliott

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Larry Lenard

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

William Heuser

Arcadia, CA 910076425

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Julie Huynh

San Jose, CA 95136

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Patricia Bode

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Michele Fulton

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Gregory Orr

Fremont, CA 0

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Thomas Lorioux

Los Angeles, CA 900312067

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Kelly Wightman

Los Angeles, CA 900298580

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

John Fisanotti

La Crescenta, CA 912142244

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Elissa Faye

North Hollywood, CA 916014086

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Christine Pina

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Katherine Nemeth

San Diego, CA 921105161

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. The experience of the European Union's Emissions Trading System has shown that carbon offsets create a whole new platform for scammers. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first.

Sincerely,

Du ng

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Kalita Todd
