

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Benita Smith

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Lawrence Lovell

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Hilary Jones

Santa Rosa, CA 954049592

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

arnold johnson

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Amber Sumrall

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Alwen Bauer

Palos Verdes Estates, CA 902742006

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Pat Avery

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Bryn Fillers

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Paul Ramos

Santa Ynez, CA 934600728

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Richard Neffson

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Susan McLaughlin

Foothill Ranch, CA 926102429

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

donna esposito

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Brigid Murphy

Chino, CA 91710

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Don Swall

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Ashley Corbin-Teich

Long Beach, CA 908143138

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Wendy Sandoval

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Inge Wagner

Los Angeles, CA 90020

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Maha Shariff

Rancho Cucamonga, CA 91739

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Katherine Ware

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Judith Gage

FORT BRAGG, CA 95437

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Robert Nix

Mission Hills, CA 913452217

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Roberta LaFrance

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Julien Hoffman

Tiburon, CA 0

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Theodore C. Snyder

Granada Hills, CA 913441062

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Dominick Falzone

Los Angeles, CA 900052060

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Kasey Rabz

Sacramento, CA 958173507

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Faye Gregory

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Helen Gustafson

Danville, CA 945062006

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Greg Ratkovsky

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Eleanor Anderson-Miles

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Rick Brown

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Ivan Rhudick

San Francisco, CA 941182307

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Hilde Brautigam

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Ann Harvey

Oakland, CA 946091549

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Terri Trammell

San Juan Capistrano, CA 926754601

As a California resident, I demand that you do not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Make America smart again,

Thomas Carlino

San Jose, CA 951174202

Elizabeth Roche

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Elizabeth Roche

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

David Larson

Long Beach, CA 90802

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Corry Ridder

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

richard saltsman

Los Angeles, CA 90034

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

edith wander

To the Air Resources Board,

As a California resident, I urge you not to endorse the California Tropical Forest Standard, and to ensure that these offsets are never accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Richard Youatt

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

q q

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In addition to climate change effects, air pollution affects the safety of American citizens, through pollution of air, water, seafood, etc. My own sister has been diagnosed with mercury toxicity, with likely sources being her lifelong diet high in seafood. Unfortunately, seafood caught off our San Diego coast is largely unsafe due to methyl mercury content, caused in part, by air pollution from fossil fuels.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better, and our government has a responsibility to protect us, including real measures to limit pollution affecting us here.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Paul Coopersmith

Inverness, CA 949370900

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Angela Gantos

Tiburon, CA 949202010

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

MARGARET ALLSEBROOK

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Anita Wisch

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you not to endorse the California Tropical Forest Standard. Please ensure that these offsets are never accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets pose unacceptably high risks of violating Indigenous and human rights and are impossible to enforce across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits. California should not be the first. We can do better.

Sincerely,

kara masters

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Jean w

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

Respectfully.

As an over four decade working, voting Rural California resident, I implore youâ€”not to endorseâ€”the California Tropical Forest Standard. Do not allow these offsetsâ€”accepted into California’s carbon trading system. It could be said this is a shell gameâ€”that does not deal with the consequences of science-based climate change with necessary, responsible and workable solutions.

I am in agreement with the Friends of the Earth:

â€œCarbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.â€•

With appreciation for your time and thoughtful consideration on this long term matter, that will touch present and future generations, including your families and descendants.

Every good intention.

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Terry Preston

Castro Valley, CA 945521719

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Staci Evans

Sacramento, CA 958273744

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Michael Neuert

Santa Rosa, CA 954077792

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Susan Hood

Sacramento, CA 958215277

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Carmelle Anaya

Chico, CA 959286811
