Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Paul Gardner

San Lorenzo, CA 945801052

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Pamela Zwehl-Burke

Santa Barbara, CA 931014261

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Sandy Parbury

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Mariano Marquez III

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Merilie Robertson

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Mary Yates

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Anthony Ramey

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

bruce hirayama

Los Angeles, CA 900347005

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

David Adams

Penn Valley, CA 959469503

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Dianne Sullivan

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Megan Wilson

There we go again not showing proper respect

for Mother Nature. We need to work with Mother

Nature, not work against Mother Nature. I don't

think Mother Nature likes all that pollution and

responds accordingly, especially when we humans show how ignorant we are. Humans and

the forests are the losers when we do not do right by the environment, which whether we like it or not, we are all dependent on for the next many eons. Is it so difficult to do the right

thing now, instead of leaving it for someone else

to do "later"? Maybe "later" will be too late!

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Thomas Burt

Santa Barbara, CA 931101251

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Beti Webb Trauth

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Kevin Shlosberg

San Jose, CA 951173644

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Dave Johnson

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Donna Crossman

Coronado, CA 921182025

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Verla D. Walker

West Covina, CA 917912064

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Dawn Sare

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Leslie Spoon

Los Osos, CA 934021863

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Barbara Kenton

San Clemente, CA 926733808

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

JEANNIE-KAY NERENBURG

King City, CA 939309689

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

teresa francis

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Blake Viola

Long Beach, CA 90802

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Greta Henderickson

Sacramento, CA 958645217

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Kathi Aker

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

mike kelly

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Sandra Herrera

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Dorothy Mandel

Santa Rosa, CA 954077139

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Marcus Hughes

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Jane Goldman

Half Moon Bay, CA 94019

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

JAMES LINDGREN

Cerritos, CA 907036711

Air Resources Board:

Three facts:

1. You and I breathe the same air.
2. Burning fossil fuels anywhere adversely affects life on earth. We must reduce availability and use of fossil fuels.
3. Mitigation of fossil fuel use at sites distant from their use generally adversely affects the health of lower income and minority residents who disproportionately live near industrial areas.

Considering these facts, I you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Natalie Anderson

Sonoma, CA 954767554

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Roshan Reporter

Los Angeles, CA 900392638

NO TO TROPICAL FOREST OFFSETS

To the Air Resources Board,

I'VE LIVED IN CA 47 YRS. I WANT U NOT TO ENDORSE THE CA TROPICAL FOREST STANDARD. IT'S INSANE. PLS ENSURE THESE OFFSETS NEVER, EVER ARE ACCEPTED IN OUR TRADING SYSTEM. THEY'RE CHEATING.

THEY'RE CHEATING & ANYONE W/ANY THINKING PROCESS CAN FIGURE THAT OUT. WAYS OF GETTING AROUND DESTRUCTION & POLLUTION ARE PRETTY THINLY VEILED. CA NEEDS TO TAKE REAL ACTION ON KEEPING OUR CLIMATE SAFE & LIVABLE.

THESE PHONY, DANGEROUS 'STANDARDS' VIOLATE EVERYTHING HEALTHY, SANE & RESPECTFUL~ ESPLY TO INDIGENOUS PEOPLES' HUMAN RIGHTS~ AND THOSE OF THE REST OF US. IF WE CAN'T DO BETTER IN OUR STAE~ OMG..

Sincerely,

Deborah Temple

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Sheryl Steinruck

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Alanna Zrimsek

San Francisco, CA 941021720

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Will H

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Lois Yuen

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Donna Ingleson

Seal Beach, CA 907405579

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Kay Lipman

Newport Coast, CA 926571010

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Kelci Skinner

Ventura, CA 930010319

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Melody Padget

Pine Valley, CA 919620855

Luigi Petrich-Dove

To the Air Resources Board,

I'm an engineer in utility-scale solar power. I have been an engineer in solar power for ten years. Why have the petroleum companies faltered in renewables? Maybe it's that there's NO INCENTIVE! BP entered solar years ago, then left it just as swiftly. Enough hesitation! Let's motivate the big players to face climate realities!

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Lisa Braun-Glazer

La Jolla, CA 920375214

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

rose glickman

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Aaron Brinkerhoff

no tropical forest offsets

To the Air Resources Board,

I am a resident of Southern California. I live within half a mile of Interstate 10. Every day smog and pollution are present. Because of the prevailing west winds, we also get smog and pollution from the Los Angeles area. So I am very much in favor of reducing carbon emissions by keeping fossil fuels in the ground, and now is your chance to be realistic. Please do not endorse the California Tropical Forest Standards. These offsets should not be accepted into California's carbon trading system. No compliance market in the world accepts tropical forest carbon credits. California should not either.

Sincerely,

Lynn Blickensderfer

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Larry Cannon

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Susan Rodriguez

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Venetia Large

Altadena, CA 910036572

Stand with Indigenous allies, say no to tropical forest offsets

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Thomas Ray

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Constantine Bogios

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

jennifer Bradford

Spring Valley, CA 919773325

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Stoney Hooker

San Diego, CA 921211522

PLEASE--NO TROPICAL FOREST OFFSETS!

To the Air Resources Board,

I respectfully urge you NOT to endorse the California Tropical Forest Standard in the CA Carbon Trading System.

The goal is to maintain CLEAN air and water, not POLLUTED through bartering give and take, which puts people, animals and our entire state at risk. I was born in California and will die here. It is the benchmark state for a clean environment. PLEASE--let's keep it that way. For our state and all the good people who live in it.

Thank you for accepting comment.

To the Air Resources Board,

As a California resident, I am writing to urge you to not endorse the California Tropical Forest Standard, and to ensure that these offsets never are accepted into California's carbon trading system.

Carbon offsets allow big emitters in California to keep polluting, instead of reducing their carbon footprint. They perpetuate pollution hotspots and prevent California from taking real action on climate change.

In particular, tropical forest carbon offsets lack integrity, pose unacceptably high risks of violating Indigenous and human rights, and are impossible to police across national borders. For these reasons, no compliance market in the world accepts tropical forest carbon credits, and California should not be the first. We can do better.

Sincerely,

Wesley Morey
