

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Dan Kittredge

La Mesa, CA 91941

Personal Message: We have been acting too slowly and our environment which sustains all life on earth is now paying the price. We simply must pick up the pace of change to a cleaner and less unhealthy environment

as we've already lost much too much time. We must get serious about how we are functioning and

what the real implications of our actions are with each decision involving fossil fuels and vehicles.

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Nina Greenberg

Los Angeles, CA 90039

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Krista Dana

Sunnyvale, CA 94087

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Jana Perinchief

Sacramento, CA 95821

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Donna Shaw

Simi Valley, CA 93065

- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Kermit Cuff

Mountain View, CA 94041

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Michele Fielding

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Joseph Michael

Berkeley, CA 94702

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Karen O'Rourke

Canoga Park, CA 91304

Personal Message: We need to move aggressively to reduce emissions in all possible ways. We do not have time to delay or enact half-measures. The effects of climate are already making themselves know in longer fire seasons, record temperatures, and more frequent and more severe storms and hurricanes.

It may be expensive and inconvenient to enact these measures, but delay will make the costs to all of us exponentially worse.

- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Christina Babst

w. Hollywood, CA 90069

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Paul Andrade

Weed, CA 96094

Personal Message: This is one of the most important issues of our time. We have the technology to improve air quality standards and should do so now. It is imperative that we move toward renewable energy as soon as possible!! CARB'S Advanced Clean Fleets rule would not mandate changes soon enough. It should mandate the changes as delineated below to address our severe climate problems in

California. All Californians deserve this, and especially those in frontline communities who suffer most from asthma and other diseases caused by air pollution.

**DO YOUR PART TO HELP OUR PEOPLE AND OUR PLANET!!**

Dear California Air Resources Board:

- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Diana Duncan

Santa Monica, CA 90403

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Personal Message: The details are in the boilerplate in the standard message. We no longer have the luxury of waiting, of thinking that "it's too expensive," or concerning ourselves overly with potential disruptions to the economy. If you do not act firmly to protect the planet's climate, the level expense and disruption will be irrelevant: they'll be well beyond anything the world could possibly afford.

Please adopt the strongest possible rule.

Thanks.

Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Melissa Hutchinson

Pacific Grove, CA 93950

La Mesa, CA 91941

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Ardis Hitchborn

Bishop, CA 93514

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Tai Stillwater

San Francisco, CA 94131

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Paula Jain

Nevada City, CA 95959

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Terri Trammell

San Juan Capistrano, CA 92675

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

J Yudell

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Tony Lavictoire

COARSEGOLD, CA 93614

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Brad Nelson

Oxnard, CA 93035

Personal Message: Time to turn towards clean energy.

Temecula, CA 92592

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Russell Burke

Guerneville, CA 95446

- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Peter Lee

San Francisco, CA 94118

Personal Message: Alternative 2!

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Venetia Large

Altadena, CA 91003

Personal Message: Breath... Air... can't live on this planet without it!

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Erin Roeder

Walnut Creek, CA 94598

Personal Message: Climate disasters are occurring with increasing frequency. It is crucial that we look at all sectors which are responsible for the most carbon emission in order to get to net zero in the near future. In California, it is especially vital that we take the lead to address the need for alternative fuels. Fossil fuels must be phased out--and quickly!

- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Edna Itzel Reyes Soriano

Moreno Valley, CA 92555

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Personal Message: Truck emissions are a huge source of air pollution, particularly in environmental justice communities that are frequently located adjacent to freeways and to large ware house or manufacturing activities which draw heavy truck traffic. Please adopt Alternative 2 that would require 100% zero emission truck sales in California by 2036 and begin transitioning all trucks to zero emissions

by 2027 instead of 2030. The faster the transition, the faster emissions are reduced and public health improved.

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Don Meehan

san jose, CA 95124

- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Benjamin Park

West Hollywood, CA 90046

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Janet Rezos

Carmichael, CA 95608

Personal Message: If California wants to meet emission goals, zero emission trucks must be built and utilized.

Dear California Air Resources Board:

North Hollywood, CA 91601

Personal Message: CARB should: 1) require 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed), 2) reduce the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10, and 3) begin transitioning all trucks to zero emission starting in 2027 (instead of 2030, as proposed).

These changes are feasible and essential for CARB to slow the climate crisis and make our air breathable.

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Stephen Greenberg

Nevada City, CA 95959

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Keith Linstead

Mission Viejo, CA 92692

Personal Message: Clean air is a must ..

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Francesca Rago

Pleasant Hill, CA 94523

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Daniel Brower

Fremont, CA 94536

Personal Message: We must do all we can to reduce the emissions for our motor vehicle fleet and this includes heavy trucks. Alternative 2 is the best action to accomplish this.

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Martin Marcus

San Diego, CA 92120

Personal Message:

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:

- Requiring 100% zero emission truck sales in California by 2036 (instead of 2040, as proposed)
- Reducing the size of class 7 and 8 (big rig) fleets covered by this rule from 50 to 10
- Beginning to transition all trucks to zero emission starting in 2027 (instead of 2030, as proposed)

According to CARB's own analysis, a strengthened Advanced Clean Fleets rule would provide:

- Over \$34 billion in additional health benefits
- An additional 60% reduction in NOx and harmful fine particulate emissions
- A 54% greater reduction of greenhouse gas emissions
- The avoidance of over 3,000 additional premature deaths

CARB cannot miss this opportunity to combat the climate crisis and deliver clean air to overburdened, frontline communities. Please update the rule to align with Alternative 2.

Sincerely,

Nancy Kubik

Novato, CA 94949

Personal Message: California gas prices are Sky high. We can reduce costs and save the environment by putting solar panels with batteries on the carports we park electric trucks under, and charge them overnight.

Dear California Air Resources Board:

Californians are feeling the impacts of the climate crisis everyday, from extreme heat to rising sea levels to wildfires to droughts. Millions of Californians continue to live in communities that are out of compliance with federal air quality standards. The state must urgently move away from fossil fuels and towards renewable energy and zero emission technologies to help address these critical issues.

CARB's proposed Advanced Clean Fleets rule would deliver significant emissions reductions, but the Board cannot miss this opportunity to get polluting trucks off the road as soon as possible.

Therefore, I ask that CARB change the proposed Advanced Clean Fleets regulation in line with Alternative 2 in the Initial Statement of Reasons (ISOR) by:
