To whom it may concern

I'm writing to express my support for switching to natural refrigerants in supermarkets and other large refrigerators in California. Leaked refrigerants are a major source of green house gases that are the cause of global climate change. I strongly prefer the "alternative one" in the staff report which would essentially require switching to natural refrigerants. In addition, supermarkets in disadvantaged areas should receive tax breaks and other incentives to upgrade their systems to natural refrigerants.

Thanks for your consideration.
