

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Michael Cuchna
Merced, CA 95340

Dear California Air Resources Board,

Alta Loma, CA 91701

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Mindy Thomas
Long Beach, CA 90803

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Jane Woehl
Sacramento, CA 95815

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Catherine Uchiyama

However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Zach Dietrich
Burbank, CA 91505

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Carol Easton
Aptos, CA 95003

Dear California Air Resources Board,

SAN FRANCISCO, CA 94114

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Isabel Freeman
Topanga, CA 90290

Morgan Hill, CA 95037

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Joan Allekotte
Albany, CA 94706

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Rex Payne

Santa Cruz, CA 95060

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Marshall Dinowitz
BELMONT, CA 94002

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Edward Bacallao
Carlsbad, CA 92009

Bill Reinke
Novato, CA 94947

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Gordon Nipp
Bakerfield, CA 93306

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Silva Gyuloglyan
Burbank, CA 91501

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Joel Carico

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Debby Dern
South San Francisco, CA 94080

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Judy Doane

Malibu, CA 90265

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Eunice Kramer
Redondo Beach, CA 90277

Escondido, CA 92026

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Leslie Friedman
San Francisco, CA 94115

Solvang, CA 93463

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Virginia Turner
Woodland Hills, CA 91367

Carmel, CA 93923

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Monica Smith
Stockton, CA 95207

San Jose, CA 95112

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

William Stafford
Sacramento, CA 95626

L.A., CA 90066

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Keith Kellogg
Santa cruz, CA 95060

Sincerely,

Mel Kronick
Palo Alto, CA 94301

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Al Sattler
Rancho PalosVerdes, CA 90275

However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Susan Walp
Pasadena, CA 91103

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Celeste Anacker
Santa Barbara, CA 93105

Dear California Air Resources Board,

San Francisco, CA 94131

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

C M Powers
Morro Bay, CA 93443

Dear California Air Resources Board,

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Ann Myers
Berkeley, CA 94705

Santa Cruz, CA 95010

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Elizabeth Boyd
Santa Barbara, CA 93108

Sincerely,

Robert Forsythe
santa clara, CA 95050

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Nancy Oliver
Sacramento, CA 95818

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Robert Paquette
Pasadena, CA 91107

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Ruth Sheldon
Brisbane, CA 94005

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Kelly Miller-Sanchez
NEWARK, CA 94560

Dear California Air Resources Board,

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Rosalind Bresnahan
San Bernardino, CA 92405

Carlsbad, CA 92011

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Joe Smith

Carol & Paul McCormick
Sacramento, CA 95819

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Jennifer Kopczynski
Camarillo, CA 93010

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Dan Morgan
Rosamond, CA 93560

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Sandara Stotenburg

However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Hildy Meyers
Huntington Beach, CA 92648

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Ken Lamance
San Carlos, CA 94070

Dear California Air Resources Board,

Pacifica, CA 94044

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Cheryl Freeman
Newport Beach, CA 92663

Oak View, CA 93022

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Teresa Scherzer
San Francisco, CA 94110

Petaluma, CA 94952

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Laura Voss
Reedley, CA 93654

M Baca
dublin, CA 94568

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Leah Odette
Long Beach, CA 90807

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Hennie Sholars
San Francisco, CA 94131

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Florence Litton
Valley Center, CA 92082

However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Christie Turano
Marina, CA 93933

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Scott Martin
San Diego, CA 92109

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

Solvang, CA 93463

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Trisha Pahmeier
Vista, CA 92084

Los Angeles, CA 90034

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Laurie Rittenberg
Studio City, CA 91604

Sincerely,

Kevin Filocamo
Oakland, CA 94610

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Linda Takemori
San Jose, CA 95133

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.

Thank you for your action so far on one of the most important issues facing the world today, I look forward to seeing these improvements in the final rule.

Sincerely,

Samantha Moulton
Burbank, CA 91506

Dear California Air Resources Board,

The majority of our vehicles today are making the climate crisis worse, and negatively impacting air quality and public health.

The California Air Resources Board has the power to set Zero Emission Vehicle (ZEV) sales requirements that will dramatically reduce vehicle emissions, protect public health, and tackle other adverse climate change. However, CARB's current proposal will still allow far too many fossil-fueled vehicles to be sold between 2026 and 2035.

We can't afford to wait for cleaner air and climate action. Zero emission vehicles are ready for adoption and California must lead the nation towards a healthy, livable future.

I am urging California to increase its proposed ZEV sales requirements starting with a 75% ZEV sales requirement by 2030 so that we can get fossil fuel vehicles off the road as soon as possible. We all deserve to live in healthy and safe communities free from toxic fossil fuel pollution. Our children deserve a livable planet.
