

Comments ARB Reducing Short-Lived Climate Pollutants due 10.30.2015

Fugitive emissions need to be clarified in more detail.

In the City of Los Angeles, there persists a problem from lack of records and/or inefficient and neglected duties to maintain and monitor methane leakage from old oil wells and/or projects constructed on the sites.

The Fairfax area is a prime example.

Neglect by Building and Safety or the Fire Department should not be forgiven under FUGITIVE EMISSIONS.

Methane Zones and Methane Buffer Zones require environmental monitoring. We see no such steps in the CEQA documentation we review.
