

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Years ago I was on contract to ARB to present a unit on Innovation Diffusion. What's happened to you guys? You should be an agency leading the charge toward green energy and zero emissions. Please reconsider your gas plant plans and move strongly toward recommending more innovative green technologies. Battery storage has improved and will continue improving. Let's provide a model for and incentivize Early Adoption of clean, green energy production facilities. Thank you!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Kristie Stevens
Grass Valley, CA 95945

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

With all the wildfires caused by drought due to climate change, we cannot wait to do what is best for the planet!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Edward Parrish
Santa Cruz, CA 95060

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

*Why more gas and pollution when we desperately need to go in the other direction to save our planet?
Please don't let more gas be imposed on us!*

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

H Stone
Gardena, CA 90249

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Where do you live? I guess not anywhere near one of these places!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Mary Rojeski
Santa Monica, CA 90405

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

When will we get clean air so we can enjoy being outside! Maybe there will always be a mask in our future from now on.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Ernestine Bonn
San Diego, CA 92116

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

When are we going to take this seriously??? What is going to be left for our children. Please act responsibly and halt any fossil fuel plans. California can and should be a leader in this.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Ada Meltzer
Los Gatos, CA 95032

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We're running out of time to do the right thing. California must lead the way on this critical issue as we have on many others.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Karen Donaldson
Grass Valley, CA 95945

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We want renewable energy sources! Please put money and time into finding environmentally sound forms of energy. No to new gas in California! Thank you for considering my opinion.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Joaninha Joaninha
Oakland, CA 94602

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We should not be considering building new fossil fuel plants! We need to focus on renewables!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Mary Orcutt
Arroyo Grande, CA 93420

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We should do all possible to curb climate change.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Steve White
Napa, CA 94558

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

*we need you to act on behalf of Californians and the planet-- not to benefit the fossil fuel companies.
ENOUGH!!*

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Susan Pelican
Woodland, CA 95695

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We need to transition away from fossil fuels immediately, not sometime in an undefined future.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Michael Friedman
El Sobrante, CA 94803

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We need to stop using fossil fuels asap. They are killing the planet. We are already seeing horrible floods, heat waves and fires.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Jan Jones
El Cerrito, CA 94530

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We need to seek new ways to the path to clean energy. I hang our clothes to dry on sunny days and have solar panels. I try to use power before 4 pm to reduce our bill!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Carol Uschyk
Calistoga, CA 94515

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We need to reward people for embracing clean energy by encouraging rooftop solar for businesses and residents, not penalizing solar owners for being more energy sustainable. We should also increase the charging grid for EVs to make it easier for people to drop their gas powered vehicles.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Leslie Louie
Oakland, CA 94611

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We need to reduce the pollution caused by carbon fuels. Clean energy should be the goal.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Janet Saillard
Walnut Creek, CA 94595

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We need to move swiftly to decarbonize our energy grid and this means moving to zero emissions as soon as possible. I live in Carlsbad CA and will be joining other coastal communities in banning new gas (methane) hookups into our houses for our safety, health, future of our planet. The writing is on the wall for fossil fuels so let's not keep building out our infrastructure that will be stranded infrastructure in the near future.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Mike McMahon
Carlsbad, CA 92010

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We need to move faster to have a chance to save a livable environment

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Sarajo Frieden
Los Angeles, CA 90027

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We must move away from fossil fuels now. It may already be too late for many aspects of the climate emergency, and we must turn fully toward non-fossil energy sources, which are abundant and expanding every day.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Kathlyn & Gay Hendricks
Ojai, CA 93023

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We must have only zero emissions targets in California

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Helen Matosich
San Francisco, CA 94118

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We know that we are the first generation to experience the impacts of climate change, and the very last generation to do anything about it. California cannot build one single new gas plant - you must be brave and let the clean wind, solar and geothermal industry do the rest.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Allison Davis
Mountain view, CA 94040

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We have to start NOW. NO new gas in California! Be the innovators of our future, and NOT the fossils of the past!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Nan Evoniuk
Woodland Hills, CA 91364

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We have the capability to insist on these measures. To reduce our footprint and reliance on the grid, my family has installed solar panels on our house and added four skylights and other passive solar measures. But we can only do so much as an individual family. We need the state to take active measures to reduce fossil fuel use and the associated pollution dramatically and quickly. Some of the scenarios you're considering slow us down and send the wrong signal!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Donald Nagle
San Mateo, CA 94402

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We have passed the point at which it is reasonable to include any new gas plants in California or anywhere. The climate crisis has already caused drought and wildfires that are horrible for humans, wildlife, and habitat - and they will only get worse, the more carbon we pour into the atmosphere by continuing to take fossil fuels out of the ground.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Judy Schultz
San Francisco, CA 94115

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We have more than enough pollution from oil. Refine what we already have to get us through. We are so close.....let's not back down Now.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Lee Ann Marienthal
Costa Mesa, CA 92627

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We have had solar on our home for 19 years. We follow the news and the poor solar companies have been jerked around for decades. We need the backing of the government to make renewable energy work. I dream of every home and building having solar panels with safe batteries. I dream of solar panels on top of every parking lot, every median strip of highways. Don't put them in the deserts where nature needs to live. It's also wasted energy traveling through wires to get to homes. Be smart. Put the power where it is used.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Laura Chinn-Smoot
San Francisco, CA 94121

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

*We have a moral responsibility to our children and our grandchildren to *not* leave them a planet in *worse* condition than we received it that is devastated by climate pollution.*

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Felix Mbuga
Milpitas, CA 95035

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We have a long way to go to fix the environmental disasters wrought on us by the right wing, and new gas plants would be a step in the WRONG direction!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Thomas Knecht
Nipomo, CA 93444

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We don't have time to temporize about dramatically cutting our use of fossil fuels. We need to stop building gas-powered plants, even if that means we have to scrounge for electricity while greener sources are coming online.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

David Simon
Los Altos, CA 94022

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

We can't continue with the status quo petroleum based transportation system. We need to think bigger and need government leadership in this.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

San Diego, CA 92110

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

This is the determining decade ? make it count by rapidly decarbonizing.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Jenny Devine
Milpitas, CA 95035

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

This is important.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Elliot Gordon
Irvine, CA 92604

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

This is important for future generations and all life on our planet.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Judy Patterson
Los Angeles, CA 90035

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

This is an important issue to me because I want to create and maintain a clean planet for my grandchildren to enjoy, thrive, and pass on to their children and grandchildren! We must look toward the future; please follow the path to clean energy!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Pam Farmer
San Diego, CA 92110

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

This is a matter of health and survival for all our citizens.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Avron Daniller
Tarzana, CA 91356

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

The time to act is NOW! We cannot wait. Our planet is in peril.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

San Francisco, CA 94114

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

The pre written statement says so much right down to the fact, our planet, our air, our food, and our waters can't wait. The damage is here present, now in so many communities though perhaps not in anyone of the state board communities.

It reminds me of the pipeline in North Dakota. The oil company says it won't leak or break, the most current materials used. The governor of Bismarck says sounds good but don't run it through here. Put it through native peoples lands and waters.

This is exactly what the state board sounds like . New gas facilities but not in our backyard.

It's time to change. No more fossil fuel use . No more poisoning facilities.

You're supposed to represent we the people not those rich few who don't even live here but pay off politicians, law enforcement, and government officials/ agencies.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Sincerely,

A Hernday
Santa Rosa, CA 95409

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

The other day I was outside my house when my gas dryer was operating and I smelled the natural gas additive to warn me of the gas. I assume not all of the gas as burned in the cycle and some exited as exhaust into the atmosphere. It reminded me to replace my gas appliances with electric ones. Please don't make any sacrifice I make by switching to electricity meaningless by maintaining gas power plants.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Ron Rouda
Venice, CA 90291

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

The latest IPCC report says it all. More gas plants are the last thing that CARB should be considering. Anything but clean and renewable is unconscionable.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Cherie Ross
San Diego, CA 92107

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

The latest IPCC report makes it clear: we must switch to clean energy now!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Melissa Hutchinson
Pacific Grove, CA 93950

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

The IPCC in its latest report stated it is now or never to stave off climate disaster, with a requirement that GHG emissions peak by 2025. Building new fossil fuel capacity in any regard directly undercuts our ability to achieve peak emissions by 2025.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Sean Quinn
San Francisco, CA 94115

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

The future of California is in your hands. Set an example and a plan for Clean Energy. Be responsible for a Draft Scoping Plan and climate laws to regulate and reduce air pollution and achieve net carbon neutrality by 2045. Do NOT include new gas plants that fail to reduce greenhouse gas emissions. Set a precedent and deliver a plan for clean energy!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Seriously we've got to take care of the environment

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Christa Shaffer
San Diego, CA 92130

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Science shows direct correlation with rising temperatures tied to use of fossil fuels and related dirty energy to increases in global warming. The clock is ticking, and we must reverse course from the scorched earth trajectory we are on. This is why I'm calling on you to ensure a clean energy future with alternative power and electric vehicles for all of our futures in our remade modern communities.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Connie Arnold
Elk Grove, CA 95758

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

save the planet NOW!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Timothy And Sean Murphy
Burbank, CA 91506

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Santa Maria Valley has enough poor air quality from blowing agricultural dirt, oil production, and high levels of methane. Air needs to be cleaner for healthy living.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Mary Housel
ORCUTT, CA 93455

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Renewables now please...

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Joe Hardin
Santa Monica, CA 90405

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Really? We have got to move away from fossil fuels?yesterday, or the planetary situation will make the horrors in Ukraine look like a walk in the park?.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Susan Hanger
Topanga, CA 90290

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Quit talking and lets have some real progress on Global Climate Change.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Ravin Carlson
San Clemente, CA 92672

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Protect the environment!!!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Milton Rindskopf
Temecula, CA 92592

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Polluted air is so dangerous to those of us with heart problems.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Dotty Gonsalves
Hayward, CA 94541

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please. We need to push and bear the burden and cost of undoing the damage we've caused with our flagrant pollution of the planet. No new gas. Our hubris could shred our life support system. That's just not right.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Patricia Wong
Yorba Linda, CA 92887

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please, no new gas projects, instead we need more renewable, taxpayers should be doing that and not subsidizing the fossil fuel industry that were paying them to destroy the planet....EVIL

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

John Christopher
Oceanside, CA 92057

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please, no new gas plants. California ought to keep leading on GHG reduction to get at climate change before it is too late. Thank you.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Matt Williams
Oakland, CA 94602

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please, consider our grandchildren. No new gas production sites in California or the country.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Carol Lane
Concord, CA 94518

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please work to eliminate fossil fuel use for electricity generation to clean up our air.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Noah Armstrong
San Jose, CA 95123

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please we need to make PROGRESS in slowing down Climate Change!!! We need to ADVANCE!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

C Dale
San Diego, CA 92177

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please think BIG!!! Please end your plans for new dirty gas and PLEASE consider researching and finding ways to develop clean energy and reduce emissions. This HAS to be done!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Bonnie Macraith
Arcata, CA 95521

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

PLEASE STOP THE DIRTY GAS (methane emissions) and encourage renewable energy sources instead.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Bill Woodbridge
Goleta, CA 93111

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please re-examine your priorities for our future. Please put "staying alive" higher on the list!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Sharon Bills
Van Nuys, CA 91406

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please reconsider the plan to include new gas-burning power plants in the next version of the Scoping Plan. Now is the time to take bold action and prioritize clean energy.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Maria Montag
El Segundo, CA 90245

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please protect our air, land, water, and life! We need aggressive, immediate measures to address the planet's needs.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Karen Bowman
La Mesa, CA 91942

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please pay close attention to this message. The well-being of California residents and the planet are at risk. Your decision can make a big difference!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Peter Andersen
Jamul, CA 91935

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please focus on ways to get our state to zero emissions. We are counting on you.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Debbie McGuire
San Jose, CA 95120

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please focus on renewable clean energy to reduce greenhouse emissions.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Susan Radke
Cypress, CA 90630

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please do this now!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Marcia Pratt
Oakland, CA 94606

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please do the obviously right thing!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Melinda Grant
Cupertino, CA 95014

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please do all you can to support the transition to clean energy now!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Melissa Waters
Laguna Niguel, CA 92677

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please ditch your plans for new gas plants and work towards CLEAN energy. The areas that already have poor air quality especially need your consideration. Thank you.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Sincerely,

Robin Bowen
Huntington Beach, CA 92649

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please consider our future when you make this decision.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Kristine Herzog
Oakland, CA 94612

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please consider managing California's energy production and distribution in a manner to limit air pollution to the greatest possible extent. Studies conducted during the Covid health emergency show that air pollution kills Californians. There was a decrease in heart attacks during the lock down, simply because Californians stayed home and drove their vehicles less. This phenomenon has been documented by the medical and scientific community.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Otto Holz
Oakland, CA 94610

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Please act with urgency!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Sincerely,

Carla Tourville
San Diego, CA 92111

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

No new gas facilities!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Maurice Robinson
Manhattan Bch, CA 90266

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

No more sitting on our hands while our amazing way of life crumbles in California! Wildfires in February??!! Dump the fossil fuels CARB, get with the program and focus on renewables!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Eric Hiss
Los Angeles, CA 90027

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

NO MORE FOSSIL FUELS!!! ONLY ALTERNATIVE ENERGIES GOING FORWARD INTO A HOPEFULLY BRIGHTER FUTURE!!!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Sergi Goldman-Hull
Oakland, CA 94601

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

No more dirty fuel

Stop killing people and planet to save a dollar

Invest in GREEN ENERGY NOW!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Anthony Filippone
San Diego, CA 92122

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

New dirty gas plants is not the way to slow climate warming or clean up air pollution. Scratch the idea of new gas plants, Instead, plan for zero emission methods of power production. PLEASE, PLEASE PLEASE!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Thomas Burt
Santa Barbara, CA 93110

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Mitigating Climate Change has to be our top priority

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Bonnie Etz-Mott
Trinidad, CA 95570

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Methane gas is the fastest way to heat the planet; the fastest way to destroy life as we now know it. Do not approve any more gas plants! Didn't you hear what the IPCC said? We need to stop building ANY new fossil fuel infrastructure NOW! And what we have already operating, we need to substitute clean energy for them. So do not include gas plants in your scoping plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Elena Engel
San Francisco, CA 94110

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Los Angeles is one of the most polluted cities in US. In CA we are trying to stop use of gas as a way to preserve the health of our planet and our children. We want to use clean energy!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Anne McMullen
Los Angeles, CA 90005

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Look ahead not behind!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Pam Mckniff
Manhattan Beach, CA 90266

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Long term RenewableEnergy contracts coupled with battery storage makes much more Environmetal & Economic sense than gas plants with the fuel cost controlled by oligarchs?

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Sven Thesen
Palo Alto, CA 94306

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Living in SoCal have to check the air quality everyday to know if I can leave my windows open or know if I need to wear a mask when riding my bike thanks to all the pollution. CA needs more clean energy not dirt new gas plants.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Deborah Malcarne
San Diego, CA 92109

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

It is beyond time that we look towards an infrastructure that places an emphasis on our collective health and the health of future generations. Moreover, renewable energy sources are proving more cost efficient and protects consumers from volatile international energy markets. Protect consumers, protect our children, and build for the future.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Robert Hoyer
Granite Bay, CA 95746

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Investigate alternative methods to replace harmful emissions created by building more polluting gas plants.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Cynthia Florenzen
Healdsburg, CA 95448

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Instead we need more solar panels. PG&E limits the number of panels on my roof. I want to see my roof & every other one filled with solar panels. Also, solar panel shade structures in every parking lot in the state!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Donald Frank
Occidental, CA 95465

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

I'm too damn old for this to help me. I'm concerned for my children, grand children, and now a great grandchild.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Carl Ondry
Roseville, CA 95747

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

I'm an elderly, 3rd generation Californian, with a 1983 BS in geology from a CSU San Jose and I have known for 40 years that we need to be doing more. I'm doing everything I possibly can but am a renter - landlords will never put solar on existing units. I live without heat in the winter because my landlord's gas wall heater does nothing without insulation in the roof. PG&E says I use 83% less electricity than other efficient homes near me but I am now not using my stove or oven unless absolutely necessary. I dry my clothes on a clothesline. Air conditioning? HAH!! I haven't even been able even open my windows at night for the past 4 years because of bad air quality. If old people like me can make this ambitious effort, you can too. Plan for a better future.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Ginny Madsen
San Leandro, CA 94577

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

I'm a mom who wants her child to grow up in a healthy, functioning state, country, and world.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Sincerely,

Carol Ng
Los Angeles, CA 90026

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

If we are to survive this decade, we must put serious effort into using clean energy. Let's start now!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Marjorie Hoskinson
Thousand Oaks, CA 91360

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

If CARB wants California to maintain a leadership position on better air quality, zero emissions scenarios and plans are the only proper way forward... Be the leader Californians need for better air quality now, and in the future!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

David Johnson
Valley Village, CA 91607

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

If a community is not the right color or not wealthy enough, then the concept of NIMBY does not apply for those people. It's apparent CARB's successful environmental motto is YITBY (Yes In Their Backyard) because they're a politically disenfranchised community because they've been assaulting these communities for decades with rising death rates.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Oscar Mace
Foster City, CA 94404

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

I was born in CA and subsequently I have asthma. People like me should not be getting asthma from our communities and when you're poor, your risk significantly increases for developing these long term health conditions.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Robin Weirich-Braccini
Irvine, CA 92604

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

*I understand that transitioning to 100% environmentally clean power rapidly is not necessarily a "straight path." That said, please accelerate the effort to put energy storage capacity on the grid over adding any fossil-fuel based plants. Under no circumstances should "new" gas plants be added to the grid without taking at least 2x the capacity of coal and petroleum plants be taken off line. Also, factor into the equation that these gas plants will only be in use for a couple decades if we're serious about getting to carbon neutral. ***WHAT FOLLOWS IS BOILER PLATE****

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Henry Morgen
Los Angeles, CA 90019

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

I live in Contra Costa and know that my neighbors in communities surrounding the oil refineries suffer from emissions. We should not be burdening other, almost always lower income communities of color, with another form of pollutants from gas plants when alternative forms of energy are available. What is CA waiting for to start making the change to cleaner energy sources? If not now, when?

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Lisa Nichols
Concord, CA 94518

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

I have asthma, and I support clean energy sources such as solar and wind power to meet as much of our electric needs as possible. Thank you

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Greg Peterson
Fairfield, CA 94534

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

I grew up in Southern California during the 1950's and early 1960's when smog in the LA area was at its peak. My parents both experienced chronic illnesses from it and worried about how it affected my brother and me. They finally moved because of these concerns. While much progress has been made since, there is still more to do. It is time to draw a line -- no new gas plants.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Beverly Johnson
Hesperia, CA 92345

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

I grew up in grossly polluted Los Angeles in the 60s and 70s and have asthma, as do several of my siblings, as a result of that pollution.

I also get to have pneumonia every few years whether I need it or not!

No one deserves to go through life dealing with illnesses that need never have started in the first place if you folks would make appropriate choices that would keep our air cleaner and start to reduce greenhouse gases?. CARB already capitulated to big industry by scrapping the EV requirements for motor vehicles back in the 90s, and look where we are today with the world overheating and literally burning up around us! Each year seems to set another record for the most acres burned in wildfires!

Please do what is right for the citizens of this state, and for Mother Earth! There is no planet B.

Please make good choices as other states (and other countries) follow our example?

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Pat Munsch
Sebastopol, CA 95473

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

I am the mother of two daughters under three years old, and I am terrified for their future if we do not take immediate and drastic action to protect the environment. No amount of profit is worth extinction.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Leslie Rader
Sunland, CA 91040

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

I am appalled that CARB is considering any new gas plants. We are facing a catastrophic climate crisis. We have only a few years left to make any significant difference in whether or not we have a livable world. We cannot afford any new gas plants anywhere. New gas plants need to be banned. CARB must bring forward a plan that does not include any new gas plants anywhere in California. In addition to being a climate issue, this is also an environmental justice issue.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Steven Hayashi
Los Gatos, CA 95032

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Get serious. Go all in on non-polluting renewables and don't go backward to fossil fuel energy resources. Let people breathe clean air! No more gas for energy.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Mike Kappus
San Francisco, CA 94116

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Gas usage and development are not the solution. They are the problem.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Grace Silva
North Hollywood, CA 91605

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Gas plants kill people with pollution! Stop them!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. Sincerely,

Darien De Lu
Sacramento, CA 95817

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Finally, as someone who lives in the urban/wildland interface and is increasingly exposed to climate risk from catastrophic wildfires, it is imperative that California show leadership in adopting a 2045 goal for the state's electric sector that is zero emissions, not the 15 MMT per year in 2045 shown in the state's current integrated resource plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Dear Bureaucrats,

What in the heck is wrong with you guys!? Have none of you ever gone out into a natural setting and fallen in love with even a small piece of our beautiful world? Perhaps the name of your department has misled you?. Air is not a resource. Air is life itself. Try not breathing for five minutes and you might get the idea.

Imagine, if you can, Air as the Holy Ghost of this planet. And imagine, if you will, yourself as a kind of care taker or a priest whose highest calling is to keep this sacred thing, our Air, from pollution.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Sincerely,

Steve Bean
Corral De Tierra, CA 93908

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

CARB's lack of urgency over the climate crisis is appalling. We have less than a decades to cut GHG emissions in half.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Jess Zelniker
North Hollywood, CA 91601

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

CARB should be the FIRST agency to find the most efficient ways to reduce our carbon footprint! PLEASE, no new gas plants in California.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Jackson Nichols
Fremont, CA 94539

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

CARB MUST PLAN MORE SIGNIFICANT ELECTRIC ENERGY GOALS FOR THE IMMEDIATE FUTURE, AND STOP PLANNING ON FOSSIL FUEL GAS PLANTS WHICH WILL NOT STOP CLIMATE DISASTER!!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Arthur Molho
Placerville, CA 95667

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

CARB is ignoring our health and safety and ignoring facts of Climate Change in California. No Fossil Fuels is clearly what we need to avert further human climate change driven damage to us Californians. Do your job now and come up with a plan that pivots hard and fast away from Fossil Fuels. Do this now.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Hali Rederer
Hali, CA 95820

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

CARB has the authority, and your Board members have the technical skills and talent necessary to make sure that the path to clean energy and stable climate is done right, with policy and guardrails to ensure the 2022 Scoping Plan lives up to the most robust plan possible...zero emissions. All scenarios must include 1) No new fossil-fuel capacity, and 2) Only zero emission targets.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Patricia Borchmann
Escondido, CA 92026

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

California should lead on clean energy.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Ld Anderson
Felton, CA 95018

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

California should be stepping up its efforts to provide clean energy for those who come after us. If you have children and grandkids as I do, how about you think about them as you make plans, which they may not be able to change, for their future?

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Peter Hemenway
San Francisco, CA 94127

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

California needs to lead the way in preparing for the next century.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Sincerely,

Margaret Clark
Napa, CA 94559

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

California needs to lead the rest of country in this effort. Please do the right thing!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Kristin Harms
San Diego, CA 92116

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

California needs to be a leader in renewables - for the sake of my kids and yours.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Danielle Castillo
Santee, CA 92071

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

California needs an aggressive plan to reduce emissions and be able to achieve carbon neutrality by 2045. In light of what is happening environmentally allowing new gas facilities is folly.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Alan Wortman
Redwood City, CA 94062

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

California must remain the nation's leader in fighting climate change - and that begins with preventing any new gas plants. The situation is urgent!

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Gary Lairmore
Ventura, CA 93003

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Burning fossil fuels is destroying life. It must end now.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Ted Rees
Mountain View, CA 94040

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

breathing is getting harder already.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Leana Rosetti
Oakland, CA 94602

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

As summers get increasingly hot, and the air continues to be contaminated by petroleum energy, you and your agency determine the future's level of degraded air quality if you don't take BOLD ACTION NOW, TO REDUCE GAS USE. When Calif air quality is as horrific as China- you and your agency will be the guilty party; if you don't seize this significant historic moment, NOW, TO REDUCE GAS, and phase it out. If Not You, then Who?? Who will save future air quality, and future quality of life. Will the future call your Cowards, or Heroes? Look at life from the eyes of the future, who wondered WHY wasn't Humanity Wise Enough to STOP USING the poisons that destroyed their air; their climate; and the health of their decedents. There are some moments in history that have Critical Effects for the Future, and NOW IS THAT MOMENT. Make Future Humanity, Proud of Your Wisdom Today.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Sincerely,

Mary Grindeland
Sunnyvale, CA 94089

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Air pollution is the number one cause of death in the world, so if California wants to continue leading the world in pollution solutions, we cannot build any more gas plants and seek cleaner and renewable sources.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Christopher Yrarrazaval
Santa Ana, CA 92706

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

After spending my first years in California in Fresno I am painfully aware that our air pollution levels are often some of the worst on the world. This has real social health costs we all suffer with.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Mike Sellers
Fort Bragg, CA 95437

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Act now on our future, while we can take proactive action, not after climate destabilizes economies and food supply.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Ed Fisher
Pasadena, CA 91106

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Jane Ellis

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Steve & Isabelle Robey
Berkeley, CA 94708

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Paula Shatkin

Jordan Hashemi-Briskin
Palo Alto, CA 94306

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Judith Smith
Oakland, CA 94601

Dear California Air Resources Board,

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Alan Schwartz
Lafayette, CA 94549

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Todd Heiler
Arcata, CA 95521

We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Barbara Mason
Campbell, CA 95008

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Kim Messmer
Santa Clara, CA 95051

Encinitas, CA 92024

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Ilya Turov
Moreno Valley, CA 92555

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Raymie Huerta
Chula Vista, CA 91911

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Robin Applegarth
Gualala, CA 95445

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Bruce Spring

Joseph McDonough
Hemet, CA 92544

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Christine James
Palo Alto, CA 94306

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Albert Raczka
El Centro, CA 92243

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Pam Zimmerman

We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Mary and John Rieger
San Diego, CA 92105

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

James Patton

Davis, CA 95618

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

John Steponaitis
San Francisco, CA 94109

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Stewart Casey
Garden Grove, CA 92841

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Thomas Deetz
Watsonville, CA 95076

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Nancy McCoy
NAPA, CA 94559

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Cindy Ferguson

Tem Narvios
San Francisco, CA 94134

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Deepali Panjabi
San Luis Obispo, CA 93401

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Kristina Fukuda
Los Angeles, CA 90034

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Elizabeth Lobos

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Ron Season
Calabasas, CA 91302

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

John Holtzclaw

Deb Federin
La Jolla, CA 92037

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Linda Howie
Woodland Hills, CA 91367

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Leslie Kowalczyk
Sonora, CA 95370

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Lisa Phenix
Carmichael, CA 95608

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Georgia Goldfarb
Malibu, CA 90265

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Fdsfka Kaljfdkslaf

Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Jennifer Kopczynski
Camarillo, CA 93010

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Kris Oswald
Sonora, CA 95370

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Sue Barthelow
Auburn, CA 95602

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Wayne Anderson
Sacramento, CA 95818

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Nancy Steiner
Los Angeles, CA 90039

Denise Tarr
San Pedro, CA 90732

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Artineh Havan
Burbank, CA 91501

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Earle Hale
Soquel, CA 95073

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Edie Bruce
El Cerrito, CA 94530

We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Deb Edwards
Ojai, CA 93024

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Wendy Rosenfeld
North Hollywood, CA 91601

Ventura, CA 93001

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Alex Luostari
Los Angeles, CA 90064

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Rhonda Henry
Orange, CA 92868

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Mark Luiso

Alice Johnson
Sacramento, CA 95841

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Colleen Doing
Burlingame, CA 94010

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Perry Gx
Tustin, CA 92780

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Steve Bush

Steph Hart
Costa Mesa, CA 92627

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Tracey Link
Solana Beach, CA 92075

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Nicole Mo
Irvine, CA 92620

Dear California Air Resources Board,

I'm writing to express my concern that CARB is not considering ambitious electric sector goals for its 2022 Scoping Plan.

Our communities and planet can't wait. We need robust plans that get our state to zero emissions. That means all of the proposed scenarios should include 1) No new fossil-fuel capacity and 2) Only zero emission targets.

As the world is decarbonizing, we have to ensure that the electric sector decarbonizes with it. We can't afford to forfeit our climate and environmental goals by offloading the pollution burden onto our electric grid. Maintaining or even increasing emissions from gas-burning power plants will result in the continued and even potentially increased pollution in environmental justice communities, which include dangerous co-pollutants that have been directly linked to higher rates of asthma, bronchitis, lung cancer, and heart disease.

Our climate laws were promises made to us to prioritize our communities, and we are looking to you to lead in protecting our health and our climate.

Sincerely,

Annette Benton
