

Dear Ms Carter,

We support and strongly recommend that CARB NOT change any of the regulatory requirements in the CARB LEX III GHG regulation. CARB should take appropriate action as needed to defend our environment by not being subject to weakened federal standards.

I have lived in California since 1960 and know the health risks associated with weakened standards. We cannot allow unscientific whims to harm our residents.

Thank you for your important work.

Sincerely,

Gail & Chuck Connors
