

**COMMENTS OF HIF USA  
ON  
CALIFORNIA AIR RESOURCES BOARD  
NOTICE OF PUBLIC AVAILABILITY OF MODIFIED TEXT  
PROPOSED LOW CARBON FUEL STANDARD AMENDMENTS**

**AUGUST 26, 2024**

Highly Innovative Fuels USA (HIF USA) appreciates the opportunity to offer comments in response to the California Air Resources Board's (CARB or the Board) 15-day Notice of Public Availability (the 15-day Notice) of modified text for the proposed Low Carbon Fuel Standard (LCFS) amendments.

As previously commented, HIF USA is a global e-Fuels company focused on harnessing renewable energy sources to achieve fuel sector decarbonization. HIF USA is currently developing a large-scale commercially viable facility for generating low-carbon e-Fuels that can be used in a number of transportation applications and has submitted an LCFS pathway for its process that is currently awaiting CARB approval. HIF USA has been an active participant in support of CARB's LCFS update process, submitting comments on the regulatory amendment package that CARB released on December 19, 2023, participating in the September 28, 2023 hearing and April 10, 2024 workshop, and submitting comments in response to the April workshop.

HIF USA has reviewed the 15-day Notice and observes that CARB does not in any way address the two key points made in our previous submittals. Because these two issues are important for diversifying California's transportation fuel supply and for encouraging the proliferation of low-carbon e-Fuels for a variety of transportation modes, we reiterate them here and incorporate our previous comments by reference.<sup>1</sup>

CARB has an obligation to consider objections and recommendations raised during its rulemaking proceedings and to address timely comments that are relevant to its decision-making process. HIF USA thus respectfully requests that CARB carefully consider and respond to the following two points before finalizing the LCFS amendments:

**I. The LCFS Regulations Should Be Amended to Include Low-CI Methanol as an Opt-In Fuel.**

CARB should incentivize the proliferation of carbon-neutral transportation fuels by amending 17 C.C.R. § 95482 of the LCFS regulations to include low carbon intensity (CI) methanol (also referred to as "green methanol") as eligible for crediting as an opt-in fuel when sold for use in marine and other specialty transportation applications such as direct methanol fuel cells. As HIF USA has

---

<sup>1</sup> See Comment 17 for Public Meeting to Hear an Update on the Low Carbon Fuel Standard (Sept. 28, 2023), available [here](#) (HIF USA pre-proposal comments to CARB Board requesting inclusion of low-CI methanol as an opt-in fuel in the LCFS regulations); Comment 389 for Proposed Low Carbon Fuel Standard Amendments (Feb. 20, 2024) at 2, available [here](#) (HIF USA comments in response to CARB 45-day proposal regarding CARB's proposed regulatory text for 17 C.C.R. § 95488.8(i)(1)(A)) (hereinafter, "HIF USA 45-Day Comments"); Comments of HIF USA on Low Carbon Fuel Standard Public Workshop - April 10, 2024 (May 9, 2024), available [here](#).

commented in its previous submittals, amending the LCFS regulations to include green methanol as an opt-in fuel would create another opportunity for CARB to incentivize low-CI fuels in hard-to-decarbonize sectors.

In a July 2022 LCFS workshop presentation, CARB staff indicated that it was considering the inclusion of methanol as an opt-in fuel for “novel applications,” including “commercial harbor craft” under Tier 2 EER-adjusted pathways.<sup>2</sup> Yet, its proposed regulatory amendments released in December 2023 did not include this proposed change, nor did CARB include this change in the 15-Day Notice, despite recommendations from multiple entities that it do so.<sup>3</sup>

In comments submitted after the April 2024 workshop, HIF USA offered to support CARB’s efforts to obtain whatever data is needed to support inclusion of green methanol as an opt-in fuel. We reiterate our readiness to assist CARB in obtaining this data, as we believe it is critical to move forward with including low-CI methanol as an LCFS opt-in fuel.

## **II. Book and Claim Accounting Should Be Preserved for Low-CI Electricity Used to Produce Hydrogen as an Input to E-Fuels.**

The 15-day Notice does not address HIF USA’s concern that the proposed changes to the regulatory text in 17 C.C.R. § 95488.8(i)(1)(A) appear to eliminate book-and-claim accounting for low-CI electricity used to produce electrolytic hydrogen as an input for eFuels. As commenters noted during the April 10, 2024 workshop,<sup>4</sup> and as HIF USA has explained in its previous submittals, CARB’s proposed changes to this provision, if finalized, would negatively impact the commercial availability of low-CI e-Fuels in the California transportation fuel market.

CARB has not explained in this rulemaking process the rationale for the proposed change, other than brief comments at the April 10 workshop, in which a CARB representative indicated that the change may reflect CARB’s interest in prioritizing the production of hydrogen as a primary transportation fuel rather than as a process input. HIF USA does not believe that elimination of the current book-and-claim allowance for hydrogen produced by electrolysis for transportation purposes is necessary to incentivize the production and use of hydrogen as a transportation fuel—as these two uses of hydrogen are complimentary and not mutually exclusive. In any event, because CARB proposes a significant change to the current regulations, it is obligated to provide a rationale and address the comments provided on this issue.

In sum, we urge CARB to refrain from finalizing any changes to 17 C.C.R. § 95488.8(i)(1)(A) that would preclude the continued use of book-and-claim accounting for low-CI electricity used for hydrogen production through electrolysis as a process step for e-Fuels. We request that CARB review and consider our submittal on this topic in response to the 45-day proposed rule.<sup>5</sup>
