December 21, 2010

To: Mr. Willis – Conestoga Energy CEO

From: Robert Tempel – WindRiver Grain COO

This letter is in regard to the request from California concerning milo handling practices into our facility at WindRiver in Garden City, Kansas. WindRiver handles approximately 8 to 12 million bushels of milo annually to both the export market and the local Bonanza BioEnergy ethanol plant. It is the normal practice of milo in western Kansas not to be dried through commercial driers. We are a semi arid climate which allows for milo to dry down naturally in the field before it is harvested. Because of this fact, WindRiver does not have a commercial drier at our facility.

Thank you,

Robert A. Tempel, COO
