Dear ARB,

I am a California shop owner and technician. I request that you please go look for VOC reductions somewhere else. Many of our favorite chemicals are either no longer available or have been replaced by others that do not work.

Brake clean is a compound that is used because it evaporates without leaving a residue. This is important, or I might say, vital in the cleaning of many parts like air conditioning and brake parts. If you take away our good brake clean and replace it with some worthless substitute, we are going to be in a bind.

Best regards, Phil Fournier, Phil's Auto Clinic, Hemet, California, 951-306-2636
