

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

Our air is already so polluted that many children suffer from asthma. Which also adds to our healthcare costs, not to mention pointless suffering of children when they have asthma attacks.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Alberto Vasquez

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

Our country is BROKE - we need to immediately get on board to build clean energy business and jobs in this field. It is the job of the CARB to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. Please reject any rule changes that would weaken the standard and pander to big corporate oil.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Frank Di Stefano  
5472 Maemurray Dr.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

As a lifelong Californian, I have seen first hand the damaging effects of fossil fuels on our environment. I remember more smoggy days as a kid than clear ones. And I remember seeing my little sister in an oxygen tent, wheezing through another asthma attack.

The Clean Air Act did wonders to make our skies bluer - my own kids enjoy many more clear days than we did. With that in mind, I wholeheartedly support any and all regulations that make our environment cleaner and safer. I want to see new technologies that give us cleaner and more sustainable energy.

Further, I am absolutely convinced that weakening environmental protections will not create more jobs. Even if it did create jobs, the health costs would simply not be worth it! Back in the '70's, industry decried proposed regulations, saying that it would destroy their profits. But those companies found ways to meet the new standards and even to prosper. And we have all benefitted from the changes.

This is California's moment to once again lead the nation in developing cleaner and more sustainable energy sources. Please uphold and protect our low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. Reject any rule changes that would weaken the standard.

Thank you from the Tucker Schoeman family in Claremont.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

925 705 7157

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

California Air Resources Board:

We need you to protect California's low-carbon fuel standard . Please deny any rule changes that weaken the standard and lead us the wrong direction.

Global warming is a critical issue and all of us depend upon you to do all you can to reduce the use of dirty, high-carbon fuels such tar sands. We need to encourage oil companies to invest in cleaner fuel not just more of the same.

Please vote to strengthen incentives for clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. Instead, the industry obsessively attempts to extract the last drop of dirty oil from the ground before switching to renewable fuels - a change which is necessary to preserve the habitability of the entire planet.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

California is known for its leadership in the transition to cleaner energy choices and clean renewable energy technology. This is something I am very proud of, and also something that should be fostered as it could bring many jobs to Californians who need them badly. How many jobs would importing extremely dirty tar sands oil from Canada?

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Californians voted down Prop 23 a couple of years ago because the majority of Californians believe that our future relies on keeping our standards high and a transition to clean renewable energy for both our health, the health of the planet and our economy.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Jeffrey D Grinnell

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Choose the health and well-being of our only planet and its inhabitants over greedy corporate interests. Our natural world is infinitely more important than corporate profits, and more important than squeezing the last drops of fossil fuels out of the planet. Our government and industry leaders have become mad with greed, and Democrats are sitting on their hands allowing the right wing to destroy our planet and enslave our people. Shame on Democrats in government. You are colluding with the right wing. It is time for NO COMPROMISE with the fascist right-wing. It is time to fight this fascist takeover of America with every ounce of energy we have. The right-wing has become greedy, fascist, anti-American traitors and should be treated as such. Oppose them or you, too, will be considered a traitor.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Colby Teller

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

You must uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. You must reject any rule changes that weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is a toxic, unconscionable act. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would absolutely undermine these intentions.

Oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. Each rule must be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. Under no circumstances should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chris Poehlmann  
POB 61, 40555 Sleepy Hollow Road

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The tar sand pipelines break frequently and end up depositing extremely poisonous waste in the surrounding lands, making those lands uninhabitable and water sources undrinkable. California is the biggest vegetable and fruit producer in the U.S.; America depends on our state's produce in the cold months. Tar sands in the blip of a pipeline break would devastate our farmland and the resulting food profits therein.

Moreover, California is rich in renewable energies that are NON-POLLUTING because we have a huge amount of sun for solar energy, wind for windmills, and ocean for tide current energy. We already have oil wells. We don't need tar sand oil.

The standard MUST ENSURE that oil companies are not only ramping up cleaner fuels but PHASING OUT dirtier ones ... such as tar sands. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The standard must ensure that oil companies are not only ramping-up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil company efforts to undermine the low-carbon fuel standard.

Thank you.

Jared Laiti  
81 Cognac Circle  
Sacramento, CA 95835

Chair Mary Nichols  
California Air Resources Board

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard. California must maintain leadership on this important issue. Time and again we've seen the forward thinking policies of this state pay off in greater innovation and a cleaner environment making California a global leader on these important issues.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Eureka, CA 95501

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Santa Barbara, CA 93105

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To all Members of the California Air Resources Board:

As a Californian who believes that the cleaner our air the healthier our population and the lower our state's medical costs, I urge you to uphold and protect California's low-carbon fuel standard, and to reject any rule changes that would weaken our current standard.

We have ample sun, wind and tides in our state to meet our energy needs in cleaner, more sustainable ways. Our current fuel standard encourages energy companies to invest in these methods rather than continue to pollute our air and add to global warming by the use of dirty, high-carbon fuels.

Please hold strong against the changes proposed by the oil industry to accommodate the environmental disaster that Canadian tar sands would be for our planet.

By no means should our low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil. If anything, our rules should be strengthened to promote clean, sustainable energy for California.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you for the work you do on behalf of us Californians.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

My reaction to destroying the terrain above the Canadian tar sands is horror. This vast area is beautiful, has many trees (read carbon sinks) and deserves not to be disturbed. Hence I join in urging you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

STACIE CHARLEBOIS

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Linda Law

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Denise Wright

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard. California must lead forward into the future of energy not capitulate into the past by caving to the oil interests.

Thank you.

Mary Ann Skweres  
7659 Sand Canyon Road  
Wrightwood, CA 92397

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

**I AM AN ASTHMA SUFFERER, PLEASE DON'T LET THESE HORRIBLE COAL PEOPLE WEAKEN THE RULES. THEY SHOULD ROT IN HELL.**

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I have seen photos of Canada's horrific looking tar sands and it is one of the major atrocities against nature I have ever seen. I do not want Canada's tar sand fueled oil coming to my state of CA and I certainly do not want the CA government starting its own evil tar sands here on CA soil. I want my own state of CA to start on much more cleaner environmentally friendly sources of energy and not take ourselves back 200 years by allowing tar sands here. I am a citizen of America and a born citizen of the state of California and I approve this message.

Thank you,  
Sincerely,  
Marika

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

[My words: No high ecological footprint supply, refinement or production chain products. The ones that we have now already require immediate amelioration. The profits of big-oil must be patriated and made public assets for the immediate retrofit, development, installation of infrastructure of all existing damaging ecological (full-distributed) footprint energy and manufacturing processes to known, and they've been long known, green and low-impact, low ecological footprint energy, manufacturing alternatives. Nothing that is happening now with the collapse of the nuclear power industry (and avoidance of its consequences, see at least Fukushima Dai ichi and Kashiwazaki Kariwa on Honshu, Japan) is at all inevitable. No alternatives need to be delayed. Everyone in the fossil fuel industry has more than enough assets. Please read and require reading by all staff of at least the short article from 1968, by Garrett Hardin, "The Tragedy of the Commons". Please do the right thing, which is to put the earth and it's estimated 100,000,000 NON-human species first. Only in this way can we properly act for the benefit of all humans.]

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Charles Alexander

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

I grew up in a Los Angeles where the air choked me and my children with regularity. Our standards have made it safe to breathe the air. Nothing, absolutely nothing should be done that will in any way weaken the air quality standards for California. We must not go back to toxic air. Hold the line, PLEASE!

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

gary Ammirati

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Jason Gregoire

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The CRIMINAL OIL INDUSTRY'S attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

DO NOT SELL-OUT OR CAVE IN TO CRIME SCENES OF BIG OIL!!! WE DEMAND THE STANDARD THA MUST ENSURE THAT OIL COMPANIES ARE NOT ONLY RAMPING UP CLEANER FUEL BUT PHASING OUT DIRTIER ONES! TAR SANDS OIL IS ONE OF THE DIRTIEST FUELS! The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

MYSELF AND MAJORITY OF CALIFORNIA CITIZENS DEMAND THAT YOU vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard. THAT IS WHAT YOUR JOB IS AND ALL THAT YOU HAVE LEGAL APPROVAL TO DO. DO IT!!!

Thank you.

To the Members of the California Air Resources Board:

As a lifelong Californian, I appreciate our state's strong air quality regulations. Some of us know what it was like under the looser rules during the 1960s, and it wasn't good.

Therefore I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on polluting energy and fight global warming. Please reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt polluting, high-carbon fuels such as oil mined from Canadian tar sands is absolutely unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only phasing into cleaner fuels, but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of polluting, highly energy-intensive fuels like tar-sands oil.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.
