The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

You will uphold and protect California's low-carbon fuel standard to reduce oil dependence and fight global warming. I now you(will) reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are ramping up cleaner fuels AND phasing out other non-compliant ones. The rule must require each oil refinery to properly account for its reliance on dirtier oil sources. The low-carbon fuel standard must not be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Vote to strengthen California's leadership on clean fuels. Reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

Please uphold and protect California's low-carbon fuel standard, maintaining consistency with state policy to phase out imported electricity made from coal, and for the same reasons. California is a island of relative sanity that I hope will some day can lead the nation.

Oil from Canadian tar sands is the beginning of Peak Oil Part II, in that production of economically available lower carbon oil is declining. Keep fuel standards that encourage cleaner fuel solutions, reducing greenhouse gas pollution. Standards must ensure that oil companies ramp up cleaner fuels and phase out dirtier ones.

In fact, the rule should be strengthened to require each oil refinery to account for its reliance on dirtier oil sources.

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

My purpose in writing today is to strongly encourage you to defend the low-carbon fuel standard to reduce global climate change.

Special interests from out of state and even out of the country may pressure you to bend on these standards, but Californians and people world wide are relying on this State's leadership in reducing CO2 emissions. With the small victory achieved in South Africa over the weekend, we hope the momentum is not broken by a backslide on this issue.

Please support California's leadership on clean fuels and prevent efforts to undo the low-carbon fuel standards.

Sincerely,

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Terry Andrews

Palos Verdes Peninsula, CA 90274-3980

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

To the California Air Resources Board:

Please do NOT weaken California's low-carbon fuel standards. In the long, and short, run, cleaner fuels mean better technology for the State, which will translate into more, and better jobs. There will be less medical leave, which will benefit families and companies.

I urge you to keep the law as it is, to encourage oil companies to put their money where their advertising mouth is, and invest in cleaner, not dirtier, technologies.

Best regards,

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard. The goal of our low-carbon fuel standard should be to reduce our use of these fuels, and move our economy to cleaner and more renewable fuels, for the benefit of both our economy and our health, by way of a cleaner environment.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Mrs. Maris Bennett  
3401 DiMaggio Way  
Antioch, CA 94509

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Mary Levendos, LCSW

Ms. Mary Levendos

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard. Nothing has changed. Climate change has not been rescinded. Carbon is the culprit. Therefore we the citizens of the state are at risk as are our children and their futures. The oil industry has to adapt and they can't maintain their profitability at the public expense. Make them adhere to the standards now in existence.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

San Diego, CA 92104

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I implore you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming, and I strongly urge you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner, more affordable fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean, reasonable fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to UPHOLD AND PROTECT California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in CLEANER fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would UNDERMINE these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to STRENGTHEN California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Mr. Emil Reisman

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Ms. Pat Blackwell-Marchant  
5737 Medallion Court  
Castro Valley, CA 94552-1708

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Carol Gold

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Sandra Garber

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Mr. Rick Sparks

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold California's low-carbon fuel standard, so that it continues to reduce dependence on dirty fuels and to fight sea-level-rise and other adverse impacts of greenhouse gas emissions. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions and to reduce greenhouse gas pollution. The standard should be strengthened to ensure that oil companies are not only bringing in cleaner fuels but also phasing out dirtier ones. Each refinery should be made to properly account for its reliance on dirtier oil sources.

Changes now proposed by the oil industry - in particular exemption of dirty fuels such as Canadian tar-sands oil - would weaken the standard and undermine its basic aims. Please reject any such rule changes. Please vote instead to strengthen California's leadership on clean fuels.

Thank you.

US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I am writing to encourage you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. We need to enforce our standards, not weaken them.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. The standard was set to encourage oil companies to invest in cleaner burning fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would not have this effect. The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. Please vote to uphold and strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard.

California consumers and businesses rightly expect low carbon fuel to be just that: fuel which emits a minimum of carbon over its lifespan. That includes its extraction as well as its burning. For instance, tar sands oil is much dirtier (more carbon-emissive) than oil which is extracted as sweet crude and requires little refinement. Of course that kind of oil is hard to find these days -- but that doesn't make dirty oil any cleaner.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources.

Thank you for the opportunity to comment -- and for all you do to protect California's air and people.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

Please uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and slow global warming. Please reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only increasing production of cleaner fuels but also are phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should we weaken the low-carbon fuel standard to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to maintain California's leadership on clean fuels. Please reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you for your careful consideration of these comments.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Kristen Cruz

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To CA Air Resources Board Chair Mary Nichols:

As an emeritus member of the American Institute of Biological Sciences (AIBS), I ask you to uphold & protect CA's low-carbon fuel standard to reduce our dependence on bioincompatible energy & fight climate change due to irreversibly accelerating global warming ([www.globalchange.gov/usimpacts](http://www.globalchange.gov/usimpacts)). I ask you to reject any rule changes to weaken the standard.

The oil industry's attempt to exempt high-carbon bioincompatible oil mined from Canadian tar sands is sociopathic. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in CA. Changes proposed by the oil industry undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels, but phasing out dirty ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate use of dirty high energy-intensive fuels like tar-sands oil. Vote to strengthen CA's leadership on clean fuels. Reject sociopathic oil company efforts to undermine the low-carbon fuel standard.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Kaye Kirkwood

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Julian Clift

Berkeley, CA 94709

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Mrs. Carol Taggart

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.
