I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Roger Runnoe

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

MIKE CLIPKA

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Spring Valley, CA 91977

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Susan McMullen

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard. With the info coming out of Durbin, South Africa and the IPCC's new info on the speed of ice-melt issues, we need to tighten our belt, NOT loosen it!!! Please keep California's standards solid and strong!

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard.

This standard needs to stay strong to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard. I know that you will come under a lot of lobbying to weaken this standard. Please remember that in spite of hard economic times, both for individuals and the state, we want this high standard. Californians know that it is very, very important, regardless of the economic hardships we are currently facing.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. Nothing should be exempted, least of all tars sands fuel (and fracking, for that matter.) As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions. The whole purpose of the standard is to create a net improvement in global carbon emissions and pollution.

The standard must ensure that oil companies are not only increasing use of cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on any and all dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil and fracking.

Please vote to **STRENGTHEN** California's leadership on clean fuels and reject any and all oil-company efforts to undermine the low-carbon fuel standard. Keep California a true leader for the environment.

Thank you.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard!! We have only ONE future: Will it be thinking like--and using--the remains of the dinosaurs of the past, waiting for the next cloud of radioactive isotopes to rain down on us from Fukushima, breathing 25% of our pollution from the coal burned IN CHINA? Or we, as the most informed and populous state continue to guide and set the example for the nation, and attempt to catch up the Germany, even China and other countries which have leapfrogged us in our early start in alternative energy under President Carter and SERI, which unfortunately our ill-informed former Governor Reagan as President, and the dinosaurs with and behind him, corporate and sage-brush rebellious fundamentalists living in an earlier century, dismantled for critical thirty years?

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Elizabeth Branham

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

Think please, we are in a recession (actually a depression if you count the 43% working adults who are unemployed - forget about the wishful statistics measuring only the workers who are still eligible to collect unemployment). We need to get the energy costs down. Look around you, especially in sacramento - how many homeless do you see? Oh yes all those working age people really want to be carrings signs say help were hungry.....They need work. If you really want to impact the air quaility you need to work on the mass transit system. Work with the refineries to find economic ways to reduce emissions.

Please ignore Center of Biodiversity and PEER they are not environmentalist they are exclusionist.

Thanks you

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Dear CARB Members :

This is to ask you to preserve California's low-carbon fuel standard by rejecting any rule changes that would weaken this climate-protection effort aimed at promoting lower-emission fuel and thereby reducing greenhouse gas pollution in California. The petroleum industry must not be permitted to undermine these standards and then worsen global warming by importing oil derived from Canadian sand tar into this state.

The low-carbon fuel standard should be strengthened to require each refinery to disclose its use of heavily polluting fuels. It is unacceptable that Canada withdraws from the Kyoto Protocol and then tries to sell us tars-sands oil while we struggle to reduce carbon emissions on many fronts, including my own installation of a 10kWH solar system at our farm and home.

The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard. In fact, we should be looking at ways to tax carbon at the source.. rather than make exemptions for pollution.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Mark Spindler

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

We cannot be like Canada and "opt out" of the Kyoto accord for money. They will regret this action forever. Someday they will look around and NO money in the world will buy back their air or rescue their land -- it will be gone and there will be NO EXIT. We must look ahead and avoid this fate.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

craig P kleber

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Ghida Banat

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Marion MacGillivray

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. Distinguished Members California Air Resources Board:

Please uphold and protect California's low-carbon fuel standard. This regulation will reduce our dependence on inefficient petroleum based energy and fight global warming. The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sand is understandable from their perspective, but is unacceptable for this planet and it's human occupants. The current fuel standard will encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. These corporations have for decades enjoyed profits of many billions of dollars - now is the moment for them to invest and adapt in ways which will minimize the emission of carbon dioxide and noxious gasses. Weakening of California's fuel low carbon fuel standard must be rejected for our California children and grandchildren.

Thank you for your time and consideration. AM

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Deborah Ramelli

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Joan Weakland

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Mr. Luis Agcaoili

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Connie Charles

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I strongly urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming and, therefore, ask you to reject any rule changes that would weaken that standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is thoroughly unacceptable. As currently crafted, California's fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in our beautiful state, California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule need, very much, to be strengthened, including requiring each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

Please uphold and protect California's low-carbon fuel standards. Please deny the oil industry's attempt to exempt dirty, high-carbon fuels, such as oil mined from Canadian tar sands from the standards. As currently crafted, the fuel standard encourages oil companies to invest in cleaner fuel solutions, thereby reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions. Please do not let this happen. Instead, please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is UNACCEPTABLE. . As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but PHASING OUT DIRTIER FUELS. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and REJECT THE TAR SANDS.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Colleen Hoff

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I strongly urge you to safeguard California's low-carbon fuel standard to reduce our dependence on dirty energy and fight climate change. Please reject any rule changes that would weaken the standard.

Big Oil's attempt to exempt dirty, high-carbon fuels, including Canadian tar sands oil, is wholly unacceptable. The current fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would deliberately undermine these intentions. Rather than weaken the standard, it should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources.

I implore you to vote to strengthen California's leadership on clean fuels and flatly reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you for your consideration.

To all of the Members of the California Air Resources Board:

I strongly wish for you to uphold and give strong protection to California's low-carbon fuel standard. This will help reduce our dependence on dirty energy sources and lessen global warming. Please reject all rule changes that would weaken the standard.

Oil industry's attempt to exempt dirty, high-carbon fuels, especially ones such as oil from Canadian tar sands should not be allowed to succeed. The changes proposed by the oil industry would undermine the intentions of the present fuel standard to encourage oil companies to invest in cleaner fuel solutions, which helps in reducing greenhouse gas pollution and reduces other forms of pollution also.

The standard should ensure oil companies use cleaner fuels and phase out dirtier ones. Please strengthen requirements for all oil refineries to properly account for their reliance on dirtier oil sources.

Sincerely,

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

As a native Californian, I trust you to lead the way for the cleanest laws enforced so that California is the healthiest state for people to live in. I can recall watching the "SMOG" roll into the San Bernardino valley in the 60's and feeling the stench of it as I walked home from school. Continued resistance to weakening the laws that have come about is imperative to keeping California on the right track.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Grass Valley, CA 95945

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Alexandra Denman

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Fabian Herrera

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Aislinn McCarthy-Sinclair  
2421 Sunrise Pl  
Santa Rosa, CA 95409

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Mr. Christopher Reiger  
498 Carl Street, #5  
San Francisco, CA 94117

917-627-2039

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

san Rafael, CA 94912

Chair Mary Nichols  
California Air Resources Board  
1001 I Street  
Sacramento, CA 95814  
US

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. Tar sands oil is the most carbon intensive fuel in existence because you have to use large amounts of petroleum products to extract the tar from the sand. Only the greedy stooges in the oil industry would attempt to classify this as low carbon.

As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

Marian Cruz

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.

To the Members of the California Air Resources Board:

I urge you to uphold and protect California's low-carbon fuel standard to reduce our dependence on dirty energy and fight global warming. I ask you to reject any rule changes that would weaken the standard.

The oil industry's attempt to exempt dirty, high-carbon fuels such as oil mined from Canadian tar sands is unacceptable. As currently crafted, the fuel standard is intended to encourage oil companies to invest in cleaner fuel solutions, reducing greenhouse gas pollution in California. The changes proposed by the oil industry would undermine these intentions.

The standard must ensure that oil companies are not only ramping up cleaner fuels but phasing out dirtier ones. The rule should be strengthened to require each oil refinery to properly account for its reliance on dirtier oil sources. By no means should the low-carbon fuel standard be weakened to accommodate the use of dirty and highly energy-intensive fuels like tar-sands oil.

Please vote to strengthen California's leadership on clean fuels and reject oil-company efforts to undermine the low-carbon fuel standard.

Thank you.
