To Whomever it may concern:

As a citizen concerned about health and environment in the U.S. I'm interested in cleaning up as much toxic waste as possible to achieve a cleaner environment and a healthier population.

Removing the highly toxic chemical perchlorethylene from the dry cleaning would be helpful in this regard.

Also, I feel that chemicals in our indoor and outdoor environment contribute to many diseases and cancers. Eliminating as many toxics as possible will reduce this impact.

Sincerely,  
Elena Taylor
