Cancer Risk Isopleth from BNSF San Diego Health Risk Assessment

Cancer Risk Isopleth from Other Local Emission Sources

Gridded map with combined cancer risks from both BNSF and other local emission sources. Risk at Perkins Elementary is in the 150-200 cancers/million range, not counting regional background risk.

The Health Risk Assessment did not include cancer risks from the estimated 32.4 tons per year of diesel particulate matter from the 10<sup>th</sup> Avenue Marine Terminal, located immediately adjacent to the Barrio Logan and downtown/East Village communities.
