Mary Nichols, Chair
California Air Resources Board
1001 "I" Street
P.O. Box 2815
Sacramento, CA 95812

Dear CARB Chair Nichols,

I am very concerned about the rapid increase of global warming and insist that California's implementation of AB 32 set a strong example for the world. We need rapid and effective reductions of greenhouse gases (GHGs). I urge that industries not receive free pollution permits--polluters should have to pay for their emissions. The proceeds should go to promote clean energy. Rather than allowing polluters to buy off-sets, there must be strong regulation of greenhouse gases. Muscular zero waste policies, with strong landfill and compost regulations, will also cut GHGs. And I urge CARB to require that all new development meet high standards for energy efficiency, and help to reduce auto travel.

I want to end my own production of GHGs and drive a Zero Emission Vehicle (ZEVs), but there are none available. When can you require that ZEVs be available to millions of Californians?

We need to plan now for at least an 80% reduction in GHG emissions before 2050. This means that electricity production must emit zero GHGs. I urge CARB to require a 100% renewable energy portfolio for all California's electricity, and soon.

Looking forward to your response.

Ms. Jeannette Boller
2814 Clune Ave.
Venice, CA 90291
