Source: 2000 US Census Data and California Air Resources Board Emission Inventory (for refinery names and locations).

Note: Total Populations within 2 miles of refineries exclude any overlap between neighboring refineries, as do average statistics for percent people of color and median household income. Statewide Average percent people of color and median household income is population-weighted. Median household income averages in the Bay Area and Los Angeles are both below the threshold for "low-income" status used by the US Department of Housing and Urban Development for those two metropolitan areas.
