Re: Strong Clean Cars Standards

Dear Chair Nichols:

I applaud the California Air Resources Board (CARB) for its national leadership in the development of motor vehicle regulations that have reduced air pollution and improved public health in California and across the United States.

Although we have made progress in combating air pollution, the vast majority of California residents still breathe unhealthy air, exposing them to an increased risk of respiratory illnesses and even premature death. Indeed, there are high levels of air pollution where I live.

Air pollution is particularly harmful to our most vulnerable populations, such as infants and children, the elderly, those living in low-income communities or those suffering with chronic illnesses like asthma or heart disease. Unfortunately, global warming is expected to compound these problems by further threatening the quality of the air we breathe and increasing our public health burdens.

As transportation represents the leading source of air pollutants and greenhouse gases in California, reducing passenger vehicle emissions is a key component in our fight against air pollution, climate change and a variety of chronic illnesses. California's commitment to leading the nation in vehicle emission standards has played a critical role in helping protect the health of our environment and of our citizens. These regulations also encourage the development of new vehicle technologies and fueling infrastructure, helping to create jobs, to reduce our dependence on oil, and to save families and businesses on transportation costs.

For these reasons, as you and the CARB board vote this month on the state's Low Emission Vehicle (LEV III), Zero Emission Vehicle (ZEV) and Clean Fuels Outlet (CFO) programs, I urge you to adopt the strongest possible standards to reduce criteria air pollutants and greenhouse gases and to ensure that the cleanest advanced vehicles and fuels are available to consumers.

Sincerely,

A handwritten signature in black ink, appearing to read "Steve Day". The signature is fluid and cursive, with a large, sweeping "S" at the beginning and a long, horizontal stroke extending to the right.
