Subject: Adopt the strongest possible clean car rules

Dear California Air Resource Board members,

On behalf of the Green Chamber of Commerce, I am writing to express our strong support for the Advanced Clean Cars package.

The Green Chamber of Commerce is a San Francisco Bay Area-based business network dedicated to promoting the success of our members, supporting the development of sustainable business practices, and advocating for green public policy.

California has set the pace for decades on clean air and vehicle standards, and we urge you to continue that history of bold leadership. The Advanced Clean Cars standards will:

- Reduce smog-forming emissions by 75 percent and reduce greenhouse gases by 52 million tons by 2025.
- Spur technological innovation by providing the long-term regulatory certainty investors need to be confident that they can earn a return on their investment.
- Ensure that California continues to be a place where clean car companies can thrive and where new advanced technology companies want to locate.

Innovative, advanced, environmentally conscious companies are the kinds of businesses the Green Chamber represents, and we believe states that welcome them will be poised for growth. By adopting strong standards, the Air Resources Board can not only improve public health and preserve our natural resources, but also support the creation of high-quality green jobs in the state. It's time to retire the old notion that we have to choose between jobs and a healthy environment—we can have the best of both worlds with your support for these standards.

Sincerely,

A handwritten signature in blue ink that reads "Sandra L. Stewart".

Sandra Stewart
Chair, Green Chamber Policy Committee
