

## **David Warren**

*Director of Sustainable Transportation*

*New Flyer*

David Warren is New Flyer's Director of Sustainable Transportation. He is responsible for supporting New Flyer's sustainable technology strategy and roadmap, with focus on zero emission technologies, including battery-electric propulsion and fuel cell technology. A mandate of David's role is working with public and private government agencies, representing New Flyer on technical, industry and regulatory committees related to clean transportation, and supporting sales on the implementation of these new technologies. Prior to this assignment, David was with North American Bus Industries, Inc. for over six years in an executive capacity overseeing the company's research and development, engineering, field service, and warranty. Previous to NABI, David worked in the medium and heavy duty truck industry for 24 years where he worked in various executive level positions including, aftermarket, service, engineering and research and development. David Warren is named on U.S. Patents related to aerodynamic drag reduction devices on Kenworth Truck Company heavy-duty trucks. He has Bachelor of Science degrees in Mechanical Engineering, a Bachelor of Science degree in Civil Engineering from California State University, Chico. In 2001, David completed the Executive Master's Degree in Business Administration (MBA) through the University of Washington.
