

The following items are a list of key CAPCOA issues regarding incentive programs, in no particular order of priority.

- Retroactive application of guidelines
- Integration and consistency between bond programs and the Moyer program
- Project life (Agricultural sources – 1 year, all others 3 – years)
- Retrofit versus replacement
- LESB (returned to the air districts), Prop 1B, and RAP funding w/o administrative cost funding
- Regulation compliance deadlines reducing opportunities to achieve emission reductions (funding compliance and expand eligibility)
- Minimum usage requirement in a depressed economy
- Address discrepancy between CARB and DOF criteria for “expenditure”
- Need for improvement in efficiency in the face of reduced CARB staff hours (e.g., streamlining and privatization)
- Need for an institutionalized route of appeal process for the Moyer program
