# Regulatory Compliance Instructions

## Carl Moyer Program

### **Applicant Certifying Compliance with All Air Quality Regulations**

The Carl Moyer Program Guidelines (Guidelines) require applicants to submit a regulatory compliance statement form requiring the applicant to certify that they are currently in compliance with all federal, state, and local air quality rules and regulations at time of application submittal (Chapter 3: Program Administration, section W.5.(B)).

1. In order to meet this requirement, air districts can have applicants sign the form: “Regulatory Compliance Statement” shown on the next page. The air district can also provide a similar form that an applicant can sign and submit in order to meet this requirement.
2. An authorized representative of the company must complete and sign the form.
3. Air districts must verify that the form has been completely filled out and maintain the original form in the project folder.

### **Documentation Verifying Compliance with Specific Air Quality Regulations**

Either at the time of application, or no later than the time of pre-inspection the district must obtain certification and submission of supporting documentation from the applicant that their engine(s), vehicle/equipment, or project fleet is currently in compliance with the applicable rules or regulations affecting the engine(s), vehicle/equipment for which they are requesting funding. (Chapter 3: Program Administration, section AA.3.).

1. This requirement can be met by following the instructions provided in the applicable Implementation Charts for a specific project. The Implementation Charts specify if a fleet must provide compliance documentation to the air district or if ARB must be contacted for verification of compliance.
2. Air district staff should use the Implementation Charts as a guide to ensure an applicant has provided the correct documentation.
3. All original documents should be maintained in the project folder.
