

Construction Sales Data for Development of Model Year Adjustment Factors in the Off-Road Diesel Emissions Inventory

Financed construction equipment sales data is provided in the Microsoft Access Database: Construction Sales Data.mdb. These data summarize all UCC-1 transactions for construction equipment from 1990-2009 as provided by Equipment Data Associates. The raw transaction data can be found in the table: EDA Data. The New Sales Only table provides a summary of only new construction equipment sales. The New Sales Only table was used in the development of model year adjustment factors as documented in the Excel workbook Construction Sales Model.xls. For more details, please consult the Technical Support Document for the Diesel Off-Road Rule.
