EMFAC2000 vehicle populations are used for model years 1966 to 1973 and 1996 to 1999; BAR vehicle populations, based on actual smog certificates sold, were used for model years 1974 to 1995.

For 1966 - 1973 and 1996 - 1999 vehicles, all of the vehicles from the "Before" dataset were used for the averages.

For MY '74-'95, 2235 vehicles received their smog inspection when NOx cut points were at gross polluter+30%; 1394 vehicles received their smog inspection when NOx cut points were at gross polluter; current NOx cut points are even lower; therefore, the "After" fleet emission rate is higher than would be the case if all the roadside tested vehicles had received their smog inspection at current cut points.

\*The 1973 and older, and the 1996 and newer vehicles were exempt from inspection requirements. Thus, the "Before" and "After" emission rates for these model years are the same.

Predicted FTP Emission Rates by Model-Year for  
Vehicles Tested on Roadside After a BAR97 ASM Smog

Model-Year	Number of vehicles	NOx			+/- 2 Sigma			Variances			Travel Fraction Wtd

a 1966 through 1973 vehicles are not subject to the Smog Check Program and the first four model-years (1996 through 1999 vehicles) were not subject to biennial Smog Check inspection requirements. Therefore, the predicted FTP emissions from the roadside sample after November 11, 1998 were used for these model-years.

b Weighted by May 1999 model-year travel fraction table.
