Vapor Recovery Equipment Defects List

Adopted: September 23, 2002 Amended: June 22, 2005 Amended: June 17, 2008 Amended: June 11, 2012

Vapor Recovery Equipment Defects List

Date of Issuance: June 17, 2008 June 11, 2012

| GVR All Sy | GVR All Systems/any E.O. | | | | |
|----------------|--|--|--|--|--|
| equipment | nt defects verification procedure | | | | |
| (a) system | (1) any equipment defect which is identified in an Executive Order (EO) certifying a system pursuant to the Certification Procedures incorporated in Section 94011 of Title 17, California Code of Regulations | as set forth in the applicable EO | | | |
| | (2) absence, improper installation, or disconnection of any component required to be used in the EO(s) that certified the system | direct observation | | | |
| | (3) installation or use of any uncertified component | | | | |
| | (4) dispensing rate greater than ten (10.0) gallons per minute (gpm) or less than the greater of five (5.0) gpm or the limit stated in the EO measured at maximum fuel dispensing | when determined as part of any ARB approved test method or direct measurement for 30 seconds minimum | | | |
| | (5) Phase I vapor poppet inoperative | direct observation | | | |
| (b) nozzles | (1) nozzle automatic liquid shutoff mechanisms which malfunction in any manner | EPO No. 26-F-1/direct observation | | | |

Note: Each defect in the tables in this list has a specific alphanumeric identification. Every identification has three parts: i)

- i) the Executive Order (E.O.) number for the table in which the defect appears (or GVR-(general vapor recovery-) for this "GVR All Systems/any E.O." page table only), ii)
- ii) a sequential letter for the equipment with which the defect is associated, and iii). As the "equipment " column in the table changes the equipment number sequence that is associated with the specific equipment begins again with the letter "(a)".
- a sequential number for the defect itself. As the "equipment" column in the table changes, the defect number sequence that is associated with the specific equipment begins again with the number one ("(1)"). The same is true for the equipment letter: at the start of a new table, the first identifying letter associated with the first equipment listed will be "a," the second "b," and so on. The Executive Order number (part i) is comprised of the characters which proceed the literal description of the system.

For example, the identification for the defect above which is written "installation or use of any uncertified component" is "GVR (a) (3)". and the last defect on the next table (page 2) is "G-70-7(d) (1)."

See page 16 for additional examples of each of these changes.

| VR-201 series Healy Phase II EVR System not including ISD | | | | |
|---|--|---|--|--|
| equipment | defects | verification procedure | | |
| (a) nozzles (1) defective vapor valve | | TP-201.2B - Flow and Pressure Measurement of Vapor Recovery Equipment or equivalent, or VR-201 Exhibit 7 - Nozzle Bag Test Procedure | | |
| | (2) any fueling point whose V/L ratio is determined to be at or below 0.80 | VR-201 Exhibit 5 <u>Vapor to</u> <u>Liquid Volume Ratio for Healy</u> <u>Phase II EVR System</u> | | |
| (b) system vapor pump | (1) inoperative vapor pumps * | direct observation in accordance with the Healy IOMM, Scheduled Maintenance, section 1.1 paragraph 3 et <u>sS</u> eq. | | |
| (c) clean air separator (CAS) | (1) clean air separator static pressure performance failure * | VR-201 Exhibit 4 <u>—</u> Determination of Static Pressure Performance of the Healy Clean Air Separator | | |
| | (2) clean air separator not in the proper operating configuration * | direct observation shown in VR-201 Exhibit 2 | | |
| | (2) ball valves are not in the proper operating configuration as shown in Figures in Exhibit 2 * | direct observation/ shown in VR-201 Exhibit 2 – System Specifications | | |
| (d) dispenser | (1) any dispenser with a dispenser piping test valve in the closed position | direct observation | | |

^{*} When the identified defect is detected in the listed equipment, the defect determination applies to all affected interrelated systems (which may include all systems at the motor vehicle fueling operation).

| VR-202 series Healy Phase II EVR System Including ISD | | | | |
|---|--|--|--|--|
| equipment | defects | verification procedure | | |
| (a) nozzles | (1) defective vapor valve | TP-201.2B - Flow and Pressure Measurement of Vapor Recovery Equipment or equivalent, or VR-202 Exhibit 7 - Nozzle Bag Test Procedure | | |
| | (2) any fueling point whose V/L ratio is determined to be at or below 0.80 | VR-202 Exhibit 5 <u></u> Vapor to Liquid Volume Ratio for Healy Phase II EVR System | | |
| (b) system vapor pump | (1) inoperative vapor pumps * | direct observation in accordance with the Healy IOMM, Scheduled Maintenance, section 1.1 paragraph 3 et sSeq. | | |
| (c) clean air separator (CAS) | (1) clean air separator static pressure performance failure * | VR-202 Exhibit 4 <u>—</u> Determination of Static Pressure Performance of the Healy Clean Air Separator | | |
| | (2) clean air separator not in the proper operating configuration * | direct observation/ shown in VR-202 Exhibit 2 | | |
| | (2) ball valves are not in the proper operating configuration as shown in Figures in Exhibit 2 * | direct observation/ shown in VR-202 Exhibit 2 – System Specifications | | |
| (d) dispenser | (1) any dispenser with a dispenser piping test valve in the closed position | direct observation | | |

^{*} When the identified defect is detected in the listed equipment, the defect determination applies to all affected interrelated systems (which may include all systems at the motor vehicle fueling operation).

| equipment | defects | verification procedure |
|--------------------------------------|--|--|
| (a) <u>VST</u> nozzle | (1) more than 30 percent (30%) of a nozzle face seal is missing (e.g., a triangular or similar shape in which greater than two and one half (2.5) inches of the face seal circumference is missing (accumulated)) | direct measurement/ observation |
| | (2) more than 0.4375 square inches of a nozzle vapor collection sleeve is missing (e.g., a rectangular shape of greater than nine sixteenths (9/16) inch or more on each side, a circular shape of eleven sixteenths (11/16) inch or more in diameter, or a triangular shape of seven eighths (7/8) inch on the side | direct measurement/ observation |
| | (3) total cumulative slit length in the convolution/s exceeds 18.0 inches | direct measurement/ observation |
| | (4) insertion interlock mechanism which will allow dispensing when the convolution is uncompressed | direct observation/GDF-09 |
| (b) EMCO nozzle | (1) more than 0.4 square inches of a nozzle boot face material is missing (e.g., a triangular or similar shape in which greater than 7/16 inches of the boot face circumference is missing (accumulated)) | direct measurement/ observation |
| | (2) slit across seven (7) consecutive bellows convolutions | direct measurement/ observation |
| | (3) a 360 degree cut around the bellows convolutions | direct measurement/ observation |
| (c) all nozzles | (51) defective vapor valve | VR-203 Exhibit 10 <u>Exhibit 7 –</u> <u>Nozzle Bag Test Procedure</u> |
| | (62) vapor valve leak rate exceeds 0.07 cubic feet per minute at a pressure of two (2) water column inches | TP-201.2B <u>- Flow and</u> Pressure Measurement of <u>Vapor Recovery Equipment</u> |
| | (3) nozzle lever has spring tension (live lever) when the vapor recovery sleeve or bellows/convolutions is uncompressed | direct observation |
| (b <u>d</u>) hoses | (1) 175 150 ml or more liquid in the vapor path | direct measurement/ sections 6.1 to 6.5 of VR-203 Exhibit 5 - Liquid Removal Test Procedure |
| | (2) any hose with a visible opening | direct observation |
| (ee) <u>VST</u> | (1) unit inoperative * | direct observation |
| ECS process <u>or</u> ing unit | $(\underline{12})$ ball valves are not locked in the proper operating configuration as shown in Figures in Exhibit 2 * $\underline{2B-2}$ | direct observation/ shown in VR-203 Exhibit 2- System Specifications |
| | (23) unit is not on or not in the automatic vapor processor mode* | diagnostic section within the VST ECS Membrane Processor: Veeder-Root Pressure Management Control (section 12 of IOMM) of the Pressure Measurement Control (section 16) of IOM |

^{*} When the identified defect is detected in the listed equipment, the defect determination applies to all affected interrelated systems (which may include all systems at the motor vehicle fueling operation)

| VR-203 series VST Phase II EVR System sans not including ISD | | | | |
|---|---|--|--|--|
| VIC-203 Series VOT Friase II EVIC System Sans not including 13D | | | | |
| <u>equipment</u> | defect | verification procedure | | |
| | (4) processor alarms for emission factor are activated for two consecutive 24 hour periods | direct observation | | |
| | (5) unit fails to activate when the UST pressure is less than or equal to 0.4 water column inch | VR-203 Exhibit 9 | | |
| | -(6) hydrocarbon concentration exceeds 12 percent (12%) | vapor processor status report | | |
| (f) vapor polisher | (1) ball valves are not in the proper operating configuration as shown in Figure in Exhibit 2 (except when maintenance or testing is being conducted.) * | direct observation / shown in Figures in VR-203 Exhibit 2 – System Specifications | | |
| | (2) unit is not on or in the automatic vapor processor mode (except when maintenance or testing is being conducted.) * | PMC Diagnostic report per 'PMC Diagnostic Menus' section within the Veeder-Root Vapor Polisher: Pressure Management Control (section 15 of IOMM) | | |
| (g) thermal oxidizer | (12) ball valves are not in the proper operating configuration as shown in Figure in Exhibit 2 * | direct observation / shown in Figures in VR-203 Exhibit 2 – System Specifications | | |
| | (23) thermal oxidizer indicator panel "power on" lamp off * | direct observation | | |
| (h) clean air separator (CAS) | (1) ball valves are not in the proper operating configuration as shown in Figures in Exhibit 2 * (except when maintenance or testing is being conducted.) | direct observation/ shown in VR-203 Exhibit 2 – System Specifications | | |
| | (2) clean air separator static pressure performance failure * | VR-203 Exhibit 14 -Determination of Static Pressure Performance of the Healy Clean Air Separator | | |
| (d) vapor return lines | (1) pressure drop through the vapor path exceeds five (5.00) water column inches at a flow rate of 60 cubic foot per hour (CFH) and eight (8.00) water column inches at a flow rate of 80 CFH | TP201.4 Methodology 1 or equivalent | | |

^{*} When the identified defect is detected in the listed equipment, the defect determination applies to all affected interrelated systems (which may include all systems at the motor vehicle fueling operation).

Example of specific three part alphanumeric identification:

Part i example: The EO number is comprised of the characters that precede the literal description of the system (VR-203 series VST Phase II EVR System sans not including ISD.

Part ii example: A second model of nozzle has been added to that EO therefore nozzles are now lettered as a, b and c (VST, EMCO, and all nozzles).

Part iii example: In VR-203 the verification procedure for the defect 'unit is inoperative' is different for all three processors listed in this EO. You will note that the VR-203 table has changes related to this as VR-203 (e) (1) through VR-203 (g) (1).

| VR-204 se | VR-204 series VST Phase II EVR System Including ISD | | | | |
|--|---|---|--|--|--|
| <u>equipment</u> | defect | verification procedure | | | |
| (a) VST nozzle | (1) more than 30 percent (30%) of a nozzle face seal is missing (e.g., a triangular or similar shape in which greater than two and one half (2.5) inches of the face seal circumference is missing (accumulated)) | direct measurement/ observation | | | |
| | (2) more than 0.4 square inches of a nozzle vapor collection sleeve is missing (e.g., a rectangular shape of greater than nine sixteenths (9/16) inch or more on each side, a circular shape of eleven sixteenths (11/16) inch or more in diameter, or a triangular shape of seven eighths (7/8) inch on the side | direct measurement/ observation | | | |
| | (3) cumulative slit length in the convolution/s exceeds 18.0 inches | direct measurement/ observation | | | |
| (b) EMCO nozzle | (1) more than 0.4 square inches of a nozzle boot face material is missing (e.g., a triangular or similar shape in which greater than 7/16 inches of the boot face circumference is missing (accumulated)) | direct measurement/ observation | | | |
| | (2) slit across seven (7) consecutive bellows convolutions | direct measurement/ observation | | | |
| | (3) there is a 360 degree cut around the bellows convolutions | direct measurement/ observation | | | |
| (c) all nozzles | (1) defective vapor valve | VR-204 Exhibit 7 – Nozzle Bag Test Procedure | | | |
| | (2) vapor valve leak rate exceeds 0.07 cubic feet per minute at a pressure of two (2) water column inches | TP-201.2B - Flow and Pressure Measurement of Vapor Recovery Equipment | | | |
| | (3) nozzle lever has spring tension (live lever) when the vapor recovery sleeve or bellows/convolutions is uncompressed | direct observation | | | |
| (d) hoses | (1) 150 ml or more liquid in the vapor path | direct measurement/ sections 6.1 to 6.5 of VR-204 Exhibit 5 - Liquid Removal Test Procedure | | | |
| | (2) any hose with a visible opening | direct observation | | | |
| (e) VST ECS processor | (1) ball valves are not in the proper operating configuration as shown in Figures in Exhibit 2 * | direct observation/ shown in VR-204 Exhibit 2 – System Specifications | | | |
| | (2) unit is not on or in the automatic vapor processor mode * | diagnostic section within the Veeder-Root ISD Manual (section 12 of IOMM) | | | |
| (f) vapor polisher | (1) ball valves are not in the proper operating configuration as shown in Figures in Exhibit 2 * (except when maintenance or testing is being conducted.) | direct observation / shown in Figures in VR-204 Exhibit 2 – System Specifications | | | |
| | (2) unit is not on or in the automatic vapor processor mode (except when maintenance or testing is being conducted.) * | diagnostic section within the Veeder-Root ISD Manual (section 12 of IOMM) | | | |
| (g) thermal oxidizer | (1) ball valve/s are not in the proper operating configuration as shown in Figures in Exhibit 2 * | direct observation/ shown in VR-204 Exhibit 2 – System Specifications | | | |
| (h) clean air separator (CAS) | (1) ball valves are not in the proper operating configuration as shown in Figures in Exhibit 2* (except when maintenance or testing is being conducted.) | direct observation/ shown in VR-204 Exhibit 2 – System Specifications | | | |
| (0,10) | (2) clean air separator static pressure performance failure * | VR-204 Exhibit 14 - Determination of Static Pressure Performance of the Healy Clean Air Separator | | | |

^{*} When the identified defect is detected in the listed equipment, the defect determination applies to all affected interrelated systems (which may include all systems at the motor vehicle fueling operation).
