Data Record Reporting Procedures for Over-the-Air Reprogrammed Vehicles and Engines California Air Resources Board August 16, 2018

Background

Pursuant to California's On-Board Diagnostic (OBD) requirements for light- and medium-duty vehicles (title 13, California Code of Regulations (CCR) section 1968.2(g)(8)) and heavy-duty engines (title 13, CCR section 1971.1(h)(6)), manufacturers are required to compile and submit in-use tracking data records for test groups and engine families that are Over-the-Air (OTA) reprogrammed if any of the specified tracking data would be cleared as a result of the reprogramming event. The procedures below describe how the data records are to be constructed, formatted, and submitted to CARB.

Data Fields and Format

The required data fields are presented in the table below. The first six fields describe the data record. The remaining fields are comprised of aggregated data parameters that OBD equipped vehicles and engines are required to make available. As indicated in the table, some of the data fields are computed from single data parameters read from reprogrammed vehicles. Others are the ratio of typically two data parameters. In these cases, the parameters are to be divided on an individual vehicle basis before the average and standard deviation are calculated. All averages and standard deviations shall be unweighted. All parameters shall be scaled as specified in the relevant industry standard (i.e., SAE J1979 or SAE J1939).

The header for the CSV file must exactly match the template below under "Example Record". No data field names may be omitted even if the vehicle does not support certain parameters. The data record shall include only a comma for unsupported fields as shown in the example records. The first 10 emission increasing auxiliary emission control device (EI-AECD) activation parameters and the first 10 greenhouse gas (GHG) Active Technology parameters shall be reported. Any additional EI-AECD or GHG Active Technology parameters shall be omitted from the file. Each data record shall be submitted in a separate CSV file.

Submission Information and Deadlines

Manufacturers are required to collect and submit the data within 60 days of the release of the software update over the air. The data should not be aggregated until after 45 days from the release of the software. Vehicles or engines that are not successfully reflashed within this timeframe may be left out of the aggregated data record. Records should be posted to the manufacturers' space on CARB's DMS system using a filename based on the certification engine family/test group name and the date of the OTA release, as follows: family_OTA_mmdyyy.csv.

Example Records:

The first row of the data record shall include the field names exactly as shown below. The second row shall contain the corresponding data values. Following the field names are two rows of data. The first is for a gasoline powered light-duty plug-in hybrid vehicle with a single cylinder bank, no secondary air, and four active GHG technologies.
