

## RRAC Meeting Announcement (1st Notice, 9/10/2002)

At the last RRAC meeting held on June 13, 2002 in Sacramento, California, the American Chemical Council (ACC) proposed a list of petroleum distillates for chamber experiments to be carried out by Dr. Carter at the University of California, Riverside. At the meeting, the ARB requested your recommendation on the ACC's list for the chamber experiments. As of today, we have received one response from Sherwin-William but would like to hear from the rest of you. Since the chamber may be available earlier than anticipated, we request that you send your input on the ACC's list <http://www.arb.ca.gov/research/reactivity/6-13-2002/jaques.pdf> to Monique Davis at [mdavis@arb.ca.gov](mailto:mdavis@arb.ca.gov) by October 4th, 2002. Based on your recommendation, we will propose the first set of petroleum distillates (approximately three to five) for the reactivity experiments and will discuss it with you at a conference call to be scheduled in November 2002. The remaining petroleum distillates will be finalized in consultation with the committee when the ARB survey ingredient data become available, which is expected in early 2003.
