Appendix: Table A

Comparison of Weibull Exposure-Response Curves

Calculated Using the 24-h SUM06 Values for 54 NCLAN Cases

(cf. Dr. H. Lee, ManTech, Inc., Corvallis, OR; Personal Communication)

Definitions

A: Weibull function parameter = maximum yield at zero ozone

B: Weibull function parameter = ozone concentration where A is reduced by 63%

C: Weibull function parameter = dimensionless shape paramenter

SUM06: The sum of the hourly ozone values at and above 6 pphm summed over monthly periods. SUM06 models are Weibull functions with the following format: $Y = A \exp (-X \div B)^C$ where X = seasonal ozone concentration.

Table A. Weibull Exposure-Response Curves using 24-h SUM06 values for NCLAN Cases

[a] Yield in kg ha^{-1} except for Lettuce^ (g m^{-1}) and Turnip+ (g $plant^{-1}$). When C was estimated to be 1.00, the shape of the curve was bounded from below to obtain convergence in the nonlinear model fitting routine. * indicates a log transformation was used to stabilize variance.

[b] Root Mean Square Error based on individual plot means.

[c] Multiple Correlation Coefficient; a measure of the proportion of the total variation in the mean explained by the regression on individual plot means.

[d] 24-h SUM06 value (ppm-h) predicted to cause a 10% or 30% yield loss relative to SUM06 = 0.

Appendix: Table B

Monthly Ozone Exposure Indices

for Air Monitoring Stations in California, 1991.

Definitions

County:	County in the State of California
Site:	Air Resources Board Site Number
Method:	Air Resources Board Method Number
PPHM:	Part per Hundred Million
Pollutant Code:	Air Resources Board Pollutant Code
S>10:	Number of Hours when Ozone Concentrations were > 10 pphm
7 HR:	Daytime 7-hr Mean Ozone Concentration (0900 to 1600 PST)
12 HR:	Daytime 12-hr Mean Ozone Concentration (0800 to 2000 PST)
N:	Number of Sampling Days
-1:	No Data

[a] Five plants were rated at each site between 25 August and 02 September 1992

[b] No. of empty nodes, where leaves had abscised

[c] No. of leaves with symptoms of ozone injury or senescence

[d] No. of green, unaffected leaves

[e] Injury = [(D + I) + (D + I + G)] where 0 = no injured leaves and 1 = all leaves injured

[f] Weighted Injury = {10 + [(0.14)D + (0.35)I + (0.66)G]}

* based on Principal Component Analysis; cf. Goldstein and Dillion, 1983

Appendix: Table E

Estimated Crop Loss from Ozone Exposure

by County and Commodity, 1991
