

#### PUBLICATIONS RESULTING FROM STUDY

Bradford, D.F., C. Swanson, and M.S. Gordon. 1992. Effects of low pH and aluminum on two declining species of amphibians in the Sierra Nevada, California. J. Herpetol. 26: 369-377.

Jennings, W.B, D.F. Bradford, and D.F. Johnson. 1992. Dependence of the garter snake Thamnophis elegans on amphibians in the Sierra Nevada of California. J. Herpetol. 26: 503-505.

Bradford, D.F., M.S. Gordon, D.F. Johnson, R.D. Andrews, and W.B. Jennings. Acidic deposition as an unlikely cause for amphibian population declines in the Sierra Nevada, California. Manuscript in review.

## GLOSSARY OF TERMS, ABBREVIATIONS, AND SYMBOLS

ANC	Acid Neutralizing Capacity
CARB	California Air Resources Board
EC	Electrical Conductivity
LC <sub>50</sub>	Calculated concentration (pH) which is lethal to 50% of animals.
Critical pH	Highest pH at and below which an endpoint value is significantly reduced below that at pH 6.0 (no aluminum) (Freda 1986).
RSW	Reconstituted soft water

## **APPENDIX A**

### **Location Maps for Survey Areas and Sample Sites**

Coordinates for the center of each survey area, and the name of the 7 1/2' quadrangle for the centerpoint, are provided in Table A-1. The location of all 30 survey areas is shown in Fig. A-1. Individual survey areas (15 km<sup>2</sup> circles) are shown on 7 1/2' USGS quadrangles in most cases, although a few are represented on 15' quadrangles. For survey areas shown on 7 1/2' quadrangles, maps are reduced in size for presentation. Dark lines on the maps indicate the 2,440 m (8,000 foot) level, below which was excluded from the survey.

**Table A-1. Centerpoint coordinates of survey areas as selected by EPA's Environmental Monitoring and Assessment Program (EMAP).**

EMAP hexagon center-points approximately 8,000 ft. or above in the Sierra Nevada. Each 40 sq. km. hexagon includes one or more lakes as identified by National Lake Survey data. Longitude and latitude are in degrees, minutes, seconds. Maps refer to the center-point only. Data compiled by Colleen Burch Johnson for John Stoddard 5/8/90.

**Figure A-1.** Location of the EMAP hexagons (40 km<sup>2</sup>) in the Sierra Nevada with centerpoint above 2,440 m elevation (8,000 feet) and containing at least one lake,  $\geq$  1 ha in area. The number of hexagons excluded because a lake was lacking was negligible (J. Stoddard, pers. comm.). Shaded hexagons represent the 30 randomly selected for survey (Table A-1).

## **APPENDIX B**

### **Location Maps for Sample Sites Within and Near the "Seven-watersheds" Study Areas**

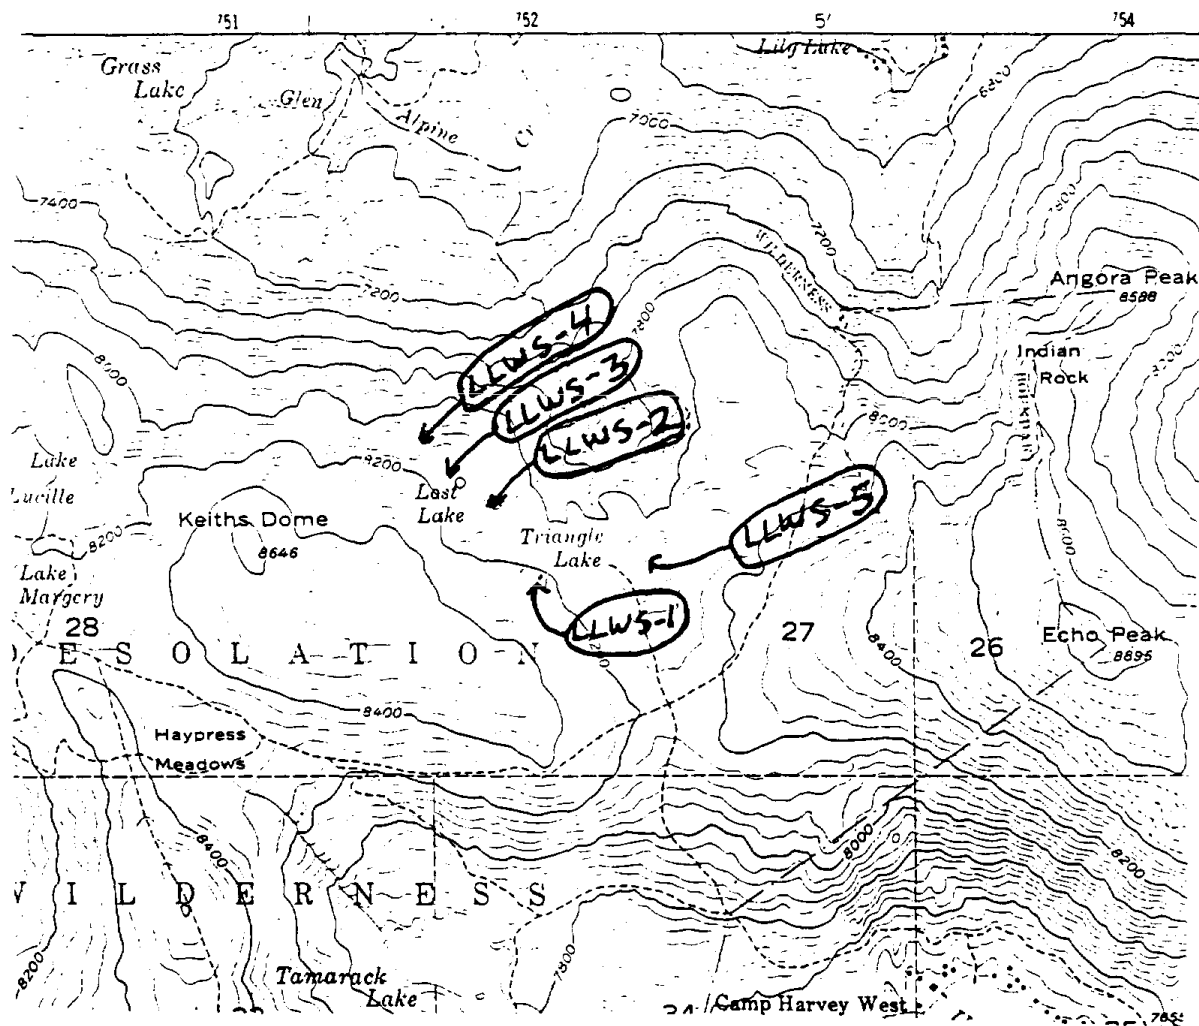

Areas surveyed include the watershed for the designated lake and, in some cases, waters in the vicinity of the watershed. Sample sites for each area are shown on 7 1/2' or 15' USGS quadrangles.

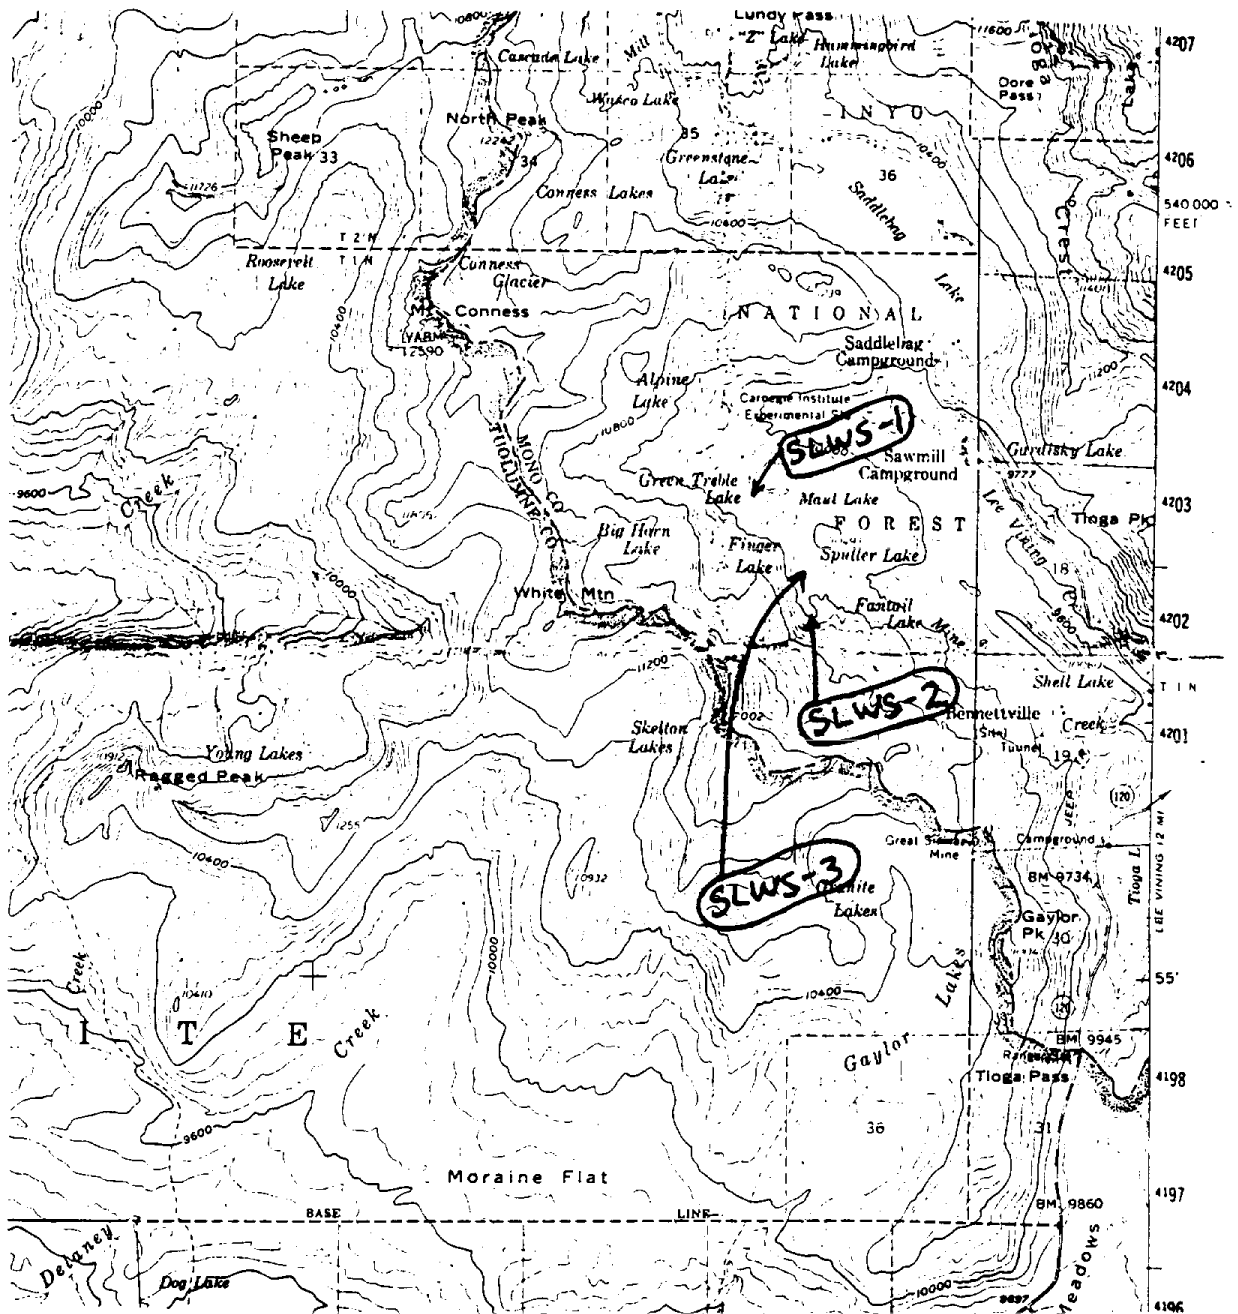

**Ruby Lake Watershed and Area (RLWS)  
Mt. Abbot 7 1/2' Quadrangle**

**Lost Lake Watershed and Area (LLWS)  
Echo Lake 7 1/2' Quadrangle**

**Spuller Lake Watershed and Area (SLWS)  
Tuolumne Meadows 15' Quadrangle**

**Pear Lake Watershed and Area (PLWS) and  
Emerald Lake Watershed and Area (ELWS)  
Lodgepole 7 1/2' Quadrangle**

## **APPENDIX C**

### **Species Occurrence and Water Chemistry for Each Sample Site, Including "Seven-watersheds" Areas**

Data variables are documented in a WordPerfect file (FLDRAW.DOC), and data are contained in a Lotus file (FLDRAW.WK1). The contents of these two files follow.

## DESCRIPTION OF VARIABLES IN "FLDRAW.WK1" FILE

FLDRAW.WK1 is a Lotus file containing results of field surveys for amphibians and water chemistry in 30 survey areas, and in watersheds of "seven-watersheds" study, during 1990 and 1991. This documentation file is FLDRAW.DOC.

### Variable   Description

SURV	Survey Area No.:  1 to 30 = randomly selected survey areas 101 to 107 = 7-watersheds study areas: 101 = Crystal Lake 102 = Ruby Lake 103 = Lost Lake 104 = Spuller Lake 105 = Topaz Lake 106 = Pear Lake 107 = Emerald Lake
SITE	Site No. within survey area (1 to 16)
YEAR	Year of sampling (90 or 91)
DATE	Julian date of sampling
STOR	Storage time, i.e., time between sampling and analysis (days)
DEP	Estimated maximum depth of water body:  1 = 0 to 0.50 m 2 = 0.51 to 1.00 m 3 = 1.01 to 1.50 m 4 = 1.51 to 2.00 m 5 = > 2.00 m
ELEV	Elevation (feet)
TEMP	Water temperature (°F) [missing data indicated by "-999"]
EC	Electrical conductivity (uS/cm)
PH	pH
ANC	Acid neutralizing capacity (ueq/L)

HYLA        Pseudacris (=Hyla) regilla

0 = Eggs/tadpoles not found and site not considered  
potential breeding habitat.

1 = Eggs/tadpoles not found but site considered  
potential breeding habitat.

2 = Eggs or tadpoles found.

BUBO        Bufo boreas (ID based on Karlstrom's (1962:4) range  
map)

0, 1, 2 as for HYLA

BUCA        Bufo canorus (ID based on Karlstrom's (1962:4) range  
map)

0, 1, 2 as for HYLA

BUSP        Bufo sp. (B. canorus and B. boreas combined)

0, 1, 2 as for HYLA

RANA        Rana muscosa

0, 1, 2 as for HYLA

AMBY        Ambystoma macrodactylum

0, 1, 2 as for HYLA

FISH        Fish

0 = No fish observed

2 = Fish observed

REMARKS    Remarks

13. ABSTRACT (Maximum 200 Words)  Toxicity testing indicated that amphibians are at little risk from low pH in waters acidified to a pH of 5.0 and aluminum concentrations from 39 to 80 ug/l. However, sublethal effects (reduced growth rate and earlier hatching) were observed for pH as high as 5.25 and the aluminum concentrations tested. We tested the hypothesis that acidification of habitats in the field has resulted in elimination of populations from waters most vulnerable to acidification, i.e., low in pH or ANC, or from waters low in ionic strength a condition that increases the sensitivity of amphibians to low pH. We surveyed potential breeding sites for two declining and one non-declining species at high elevation within 30 randomly selected survey areas, and compared chemical parameters between sites containing a species and sites lacking the species. No significant differences were found that were consistent with the hypothesis, and water chemistry did not differ among sites inhabited by the three species. These findings imply that acidic deposition is unlikely to have been a cause of recent amphibian population declines in the Sierra Nevada.
