Dear Ms. Shimer:

I realize that this comment may be coming in too late. I only skimmed through the document, and I'd like to see more elaboration on the discussion of ozone emitting air cleaning equipment. What makes the air cleaners emit ozone? Is it all ion producing air cleaners? I have contacted several air cleaning companies to ask if their negative ion producing system emits ozone, and how much. Their answer is always a very negligible amount, but they cannot not tell me how much. I am guessing that ozone is measurable, and they have the data but do not want to disclose it. I think this is a big problem.

It's great that your report alerts consumers to the avoid ozone. But how will we avoid ozone emitting air purifiers if the manufactuers won't disclose that info on the product info sheets and even if you contact them?

Yours,

Susan JunFish, MPH
