

RRAC Meeting Announcement (2nd Notice, 11/13/2002)

At the 9/10 email notice, ARB requested that you send your input on the list of petroleum distillates proposed by the American Chemical Council for chamber experiments to be carried out by Dr. Carter at the University of Californian, Riverside. As of today, we have received several inputs. Based on the inputs received, the ARB will propose the first set of petroleum distillates for chamber experiments. The remaining petroleum distillates will be finalized in consultation with the committee when the ARB survey ingredient data become available in early 2003.

A conference call is setup to discuss the proposed first set of petroleum distillates on December 4th, 2002. from 11 AM to 12:00 PM PST. A meeting agenda (including calling information) and other relevant information will be released next week.

In addition, the current status of MIR update for the California Aerosol Coatings Regulation will be presented at the meeting. As you may know, the Board requires that the MIR values used in the regulation be reviewed every 18 months.

Please let Dr. Dongmin Luo (dluo@arb.ca.gov) know if you are able to participate in this conference call so he can reserve appropriate number of phone lines.
