Dear Mr. Fink:

Husky V3 Nozzle for use with Hasstech System

You requested California Air Resources Board (CARB) certification of the Husky V3 Nozzle. The Husky V3 Nozzle has been tested and evaluated for use with the Hasstech System specified in Executive Order G-70-164.

The Husky Model V3 nozzle is an inverted coaxial vapor recovery dispensing nozzle. The Model V3 does not have a vapor valve and is intended for use only on systems equipped with a vapor valve. The nozzle is not equipped with a vapor guard but may be equipped with a common splash guard and may have a hold open device. The Husky V3 nozzle is designed to be used on vapor assist gasoline vapor recovery systems where the working pressures do not exceed 50 psi. The manufacturer's name and model number shall be stamped on the valve's body.

As required by CARB certification procedures, the necessary approvals from the Office of the State Fire Marshal and the Division of Occupational Safety and Health have been obtained. I find that the use of the Husky V3 Nozzle, when installed in accordance with the manufacturer's instructions, will not adversely effect the performance of the vapor recovery system. Therefore, the Husky V3 Nozzle is certified for use with the Hasstech vapor recovery system specified in Executive Order G-70-164.

If you have any questions or need further assistance, please contact Joe Guerrero at (916) 324-7343 or Laura McKinney at (916) 327-1525.

Sincerely,

James J. Morgester, Chief  
Compliance Division
