Dear Mr. Biesecker:

#98-03A

EBW 802 Series Pressure/Vacuum Vent Valve

On September 19, 1995, you requested California Air Resources Board (CARB) certification of the EBW 802 Series Pressure/Vacuum Vent Valve. The EBW Models 802-309 (3") Pressure/Vacuum (P/V) vent valves are designed to be installed on fuel storage tank vents at gasoline dispensing facilities. The p/v valves are offered in either a NPT female threaded or "O" ring sealed slip-on version for 2" and 3" steel vent pipe. The valve is designed to vent pressure at +3" water column and vent vacuum at -8" water column. The cap assembly includes a fine mesh screen to prevent the entry of foreign objects.

The EBW 802 Series Pressure/Vacuum Vent Valves were approved under CARB Approval Letter #98-03, issued February 4, 1998. Unfortunately, in the original approval letter only one part number was reference, Part # 802-309 for the 3" PV valv. Part # 802-308 for the 2" PV valve was omitted. This letter is to clarify the language in # 98-03 regarding the second set of three digit numbers following the 802 Series designation.

Part # 802-309 refers to the 3" PV vent valve.

Part # 802-308 refers to the 2" PV vent valve .

Both valves are recognized as being certified by the California Air Resources Board by this letter.

Jim Biesecker
