Exhibit 8

Required Items in Conducting TP-201.3
(Executive Orders VR-201-L and VR-202-L)

The instructions below are required when conducting TP-201.3 for these systems. The tester shall document that each step was followed as indicated below and shall include this page of the Exhibit with the submission of TP-201.3 test results. Note that districts may require use of an alternate form to meet these requirements, provided the alternate form includes the same minimum parameters.

1. Prior to conducting TP-201.3, all four ball valves on the Healy Clean Air Separator (CAS) shall be closed, as shown in Figure 1 or Figure 1H, to isolate it from the Underground Storage Tank (UST) system to permit the pressurization of the UST system. Figure 1 applies to vertical CAS installations and Figure 1H applies to horizontal CAS installations.

2. Conducting TP-201.3 with any dispenser piping test valve in the closed position is not permitted. Any dispenser with a dispenser piping test valve in the closed position while conducting TP-201.3 will bias the test towards compliance.

3. After conducting TP-201.3, the four ball valves on the Healy Clean Air Separator (CAS) shall be locked in their normal operating positions as shown in Figure 2B-2 or 2B-2H, Exhibit 2 of Executive Orders VR-202-L and VR-202-L. Figure 2B-2 applies to vertical CAS installations and Figure 2B-2H applies to horizontal CAS installations.
