The instructions below are required when conducting TP-201.3 for these systems. The tester shall document that each step was followed as indicated below and shall include this page of the Exhibit with the submission of TP-201.3 test results. Note that districts may require use of an alternate form to meet these requirements, provided the alternate form includes the same minimum parameters.

1. Prior to conducting TP-201.3, all four ball valves on the Healy Clean Air Separator (CAS) shall be closed, as shown in Figure 8-1 or Figure 8-1H, to isolate it from the Underground Storage Tank (UST) system to permit the pressurization of the UST system. Figure 8-1 applies to vertical Clean Air Separator installations and Figure 8-1H applies to horizontal Clean Air Separator installations.

2. Conducting TP-201.3 with any dispenser piping test valve in the closed position is not permitted. Any dispenser with a dispenser piping test valve in the closed position while conducting TP-201.3 will bias the test towards compliance.

3. After conducting TP-201.3, the four ball valves on the Healy Clean Air Separator (CAS) shall be locked in their normal operating positions as shown in Figure 2-2 or 2-2H, Exhibit 2 of Executive Orders VR-201 and VR-202. Figure 2-2 applies to vertical Clean Air Separator installations and Figure 2-2H applies to horizontal Clean Air Separator installations.

Configuration of Healy Clean Air Separator to Conduct TP-201.3

Items Required to Conduct TP-201.3

- Vent Valve (Supplied by Installer)
- Minimum Slope 1/8" per foot, 100 ft. max. length
- Float Check Valve P/N 9456G Overfill Protection
- Ball Valve Closed to Conduct TP-201.3
- Air Breather Assembly P/N 9948 12" minimum above grade
